His book '1421: The Year China Discovered the World' has sold 1 million copies in over 100 countries in 20 different languages. The book's latest spin-off is a long-term documentary being filmed by the Hong Kong-based broadcaster Phoenix TV, part-owned by Rupert Murdoch.

Junk History - Four Corners

Rowan Gavin Paton Menzies was a British author and retired submarine lieutenant-commander who has written books promoting claims that the Chinese sailed to America before Columbus. Historians have rejected Menzies' theories and assertions and have categorised his work as pseudohistory. He was best known for his controversial book 1421: The Year China Discovered the World, in which he asserts that the fleets of Chinese Admiral Zheng He visited the Americas prior to European explorer Christopher C

Gavin Menzies - Wikipedia

In his bestselling book, "1421: The Year China Discovered America," British amateur historian Gavin Menzies turns the story of the Europeans' discovery of America on its ear with a startling idea: Chinese sailors beat Christopher Columbus to the Americas by more than 70 years. The book has generated controversy within the halls of scholarship.

Wikimedia Commons has media related to 1421. Year 1421 (MCDXXI) was a common year starting on Wednesday (link will display the full calendar) of the Julian calendar . File:Sint Elizabethsvloed 1421.jpg

On March 8, 1421, the largest fleet the world had ever seen set sail from China to "proceed all the way to the ends of the earth to collect tribute from the barbarians beyond the seas." When the fleet returned home in October 1423, the emperor had fallen, leaving China in political and economic chaos. The great ships were left to rot at their moorings and the records of their journeys were destroyed. Lost in the long, self-imposed isolation that followed was the knowledge that Chinese ships had reached America seventy years before Columbus and had circumnavigated the globe a century before Magellan. And they colonized America before the Europeans, transplanting the principal economic crops that have since fed and clothed the world.

On 8 March 1421, the largest fleet the world had ever seen set sail from China. The ships, some nearly five hundred feet long, were under the command of Emperor Zhu Di's loyal eunuch admirals. Their mission was 'to proceed all the way to the end of the earth to collect tribute from the barbarians beyond the seas' and unite the world in Confucian harmony. Their journey would last for over two years and take them around the globe but by the time they returned home, China was beginning its long, self-imposed isolation from the world it had so recently embraced. And so the great ships were left to rot and the records of their journey were destroyed. And with them, the knowledge that the Chinese had circumnavigated the globe a century before Magellan, reached America seventy years before

Columbus, and Australia three hundred and fifty years before Cook... The result of fifteen years research, 1421 is Gavin Menzies' enthralling account of the voyage of the Chinese fleet, the remarkable discoveries he made and the persuasive evidence to support them: ancient maps, precise navigational knowledge, astronomy and the surviving accounts of Chinese explorers and the later European navigators as well as the traces the fleet left behind - from sunken junks to the votive offerings left by the Chinese sailors wherever they landed, giving thanks to Shao Lin, goddess of the sea. Already hailed as a classic, this is the story of an extraordinary journey of discovery that not only radically alters our understanding of world exploration but also rewrites history itself.

Poses a controversial argument that China initiated the Renaissance, in a painstakingly researched chronicle that cites the appearance of Chinese ambassadors in early fifteenth-century Tuscany who met with Pope Eugenius IV and shared history-influencing maps and technology. 150,000 first printing.

Greatly expanding on his blockbuster 1421, distinguished historian Gavin Menzies uncovers the complete untold history of how mankind came to the Americas—offering new revelations and a radical rethinking of the accepted historical record in *Who Discovered America?* The iconoclastic historian's magnum opus, *Who Discovered America?* calls into question our understanding of how the American continents were settled, shedding new light on the well-known "discoveries" of European explorers, including Christopher Columbus. In *Who Discovered America?* he combines meticulous research and an adventurer's spirit to reveal astounding new evidence of an ancient Asian seagoing tradition—most notably the Chinese—that dates as far back as 130,000 years ago. Menzies offers a revolutionary new alternative to the "Beringia" theory of how humans crossed a land bridge connecting Asia and North America during the last Ice Age, and provides a wealth of staggering claims, that hold fascinating and astonishing implications for the history of mankind.

The New York Times bestselling author of 1421 offers another stunning reappraisal of history, presenting compelling new evidence that traces the roots of the European Renaissance to Chinese exploration in the fifteenth century. The brilliance of the Renaissance laid the foundation of the modern world. Textbooks tell us that it came about as a result of a rediscovery of the ideas and ideals of classical Greece and Rome. But now bestselling historian Gavin Menzies makes the startling argument that in the year 1434, China—then the world's most technologically advanced civilization—provided the spark that set the European Renaissance ablaze. From that date onward, Europeans embraced Chinese intellectual ideas, discoveries, and inventions, all of which form the basis of western civilization today. Florence and Venice of the early fifteenth century were hubs of world trade, attracting traders from across the globe. Based on years of research, this marvelous history argues that a Chinese fleet—official ambassadors of the emperor—arrived in Tuscany in 1434, where they were received by Pope Eugenius IV in Florence. The delegation presented the influential pope with a wealth of Chinese learning from a diverse range of fields: art, geography (including world maps that were passed on to Christopher Columbus and Ferdinand Magellan), astronomy, mathematics, printing, architecture, steel manufacturing, military weaponry, and more. This vast treasure trove of knowledge spread across Europe, igniting the legendary inventiveness of the Renaissance, including the work of such geniuses as da Vinci, Copernicus, Galileo, and more. In 1434, Gavin Menzies combines this long-overdue historical reexamination with the excitement of an investigative adventure. He brings the reader aboard the remarkable Chinese fleet as it sails from China to Cairo and Florence, and then back across the world. Erudite and brilliantly reasoned, 1434 will change the way we see ourselves, our history, and our world.

"Tremendous. This guy has done history like you would not believe." —Glenn Beck The secrets of history's most enduring mystery are finally revealed in *The Lost Empire of Atlantis*. Through impeccable research and intelligent speculation, Gavin Menzies, the New York Times bestselling author of 1421, uncovers the truth behind the mysterious "lost" city of Atlantis—making the startling claim that the "Atlanteans" discovered America 4,000 years ago and ruled a vast Mediterranean empire that was violently destroyed in 1,500 BC. Forget everything you've ever thought about the Atlantis legend—Gavin Menzies will make you a believer!

One hundred years before Columbus and his fellow Europeans began their voyages of discovery, fleets of giant junks commanded by the eunuch admiral Zheng He and filled with the empire's finest porcelains, lacquerware, and silk ventured to the world's "four corners." Seven epic expeditions brought China's treasure ships across the China Seas and Indian Ocean, from Japan to the spice island of Indonesia and the Malabar Coast of India, on to the rich ports of the Persian Gulf and down the East African coast, to China's "El Dorado," and perhaps even to Australia, three hundred years before Captain Cook's landing. It was a time of exploration and expansion, but it ended in a retrenchment so complete that less than a century later, it was a crime to go to sea in a multimasted ship. In *When China Ruled the Seas*, Louise Levathes takes a fascinating and unprecedented look at this dynamic period in China's enigmatic history, focusing on the country's rise as a naval power that briefly brought half the world under its nominal authority. Drawing on eyewitness accounts, official Ming histories, and African, Arab, and Indian sources, many translated for the first time, Levathes brings readers inside China's most illustrious scientific and technological era. She sheds new light on the historical and cultural context in which this great civilization thrived, as well as the perception of China by other contemporary cultures. Beautifully illustrated and engagingly written, *When China Ruled the Seas* is the fullest picture yet of the early Ming dynasty—the last flowering of Chinese culture before the Manchu invasion.

THE ONCE AND FUTURE HEGEMON In a world bristling with dangers, only one enemy poses a truly mortal challenge to the United States and the peaceful and prosperous world that America guarantees. That enemy is China, a country that invented totalitarianism thousands of years ago whose economic power rivals our own that believes its superior race and culture give it the right to universal deference that teaches its people to hate America for standing in the way of achieving its narcissistic "dream" of world domination that believes in its manifest destiny to usher in the World of Great Harmony which publishes maps showing the exact extent of the nuclear destruction it could rain down on the United States. Steven Mosher exposes the resurgent aspirations of the would-be hegemon—and the roots of China's will to domination in its five-thousand-year history of ruthless conquest and assimilation of other nations, brutal repression of its own people, and belligerence toward any civilization that challenges its claim to superiority. The naïve idealism of our "China hands" has lulled America into a fool's dream of "engagement" with the People's Republic of China and its "peaceful evolution" toward democracy and freedom. Wishful thinking, says Mosher, has blinded us to the danger we face and left the world vulnerable to China's overweening ambitions. Mosher knows China as few Westerners do. Having exposed as a visiting graduate student the monstrous practice of forced abortions, he became the target of the regime's crushing retaliation. His encyclopedic grasp of

China's history and its present-day politics, his astute insights, and his bracing realism are the perfect antidote for our dangerous confusion about the Bully of Asia.

The brilliance of the Renaissance laid the foundation of the modern world. Textbooks tell us that it came about as a result of a rediscovery of the ideas and ideals of classical Greece and Rome. But now bestselling historian Gavin Menzies makes the startling argument that in the year 1434, China—then the world's most technologically advanced civilization—provided the spark that set the European Renaissance ablaze. From that date onward, Europeans embraced Chinese ideas, discoveries, and inventions, all of which form the basis of Western civilization today. The New York Times bestselling author of 1421 combines a long-overdue historical reexamination with the excitement of an investigative adventure, bringing the reader aboard the remarkable Chinese fleet as it sails from China to Cairo and Florence, and then back across the world. Erudite and brilliantly reasoned, 1434 will change the way we see ourselves, our history, and our world.

The Island of Seven Cities unveils the first tangible proof that the Chinese settled in the New World before Columbus. In the summer of 2003, architect Paul Chiasson decided to climb a mountain he had never explored on Cape Breton Island, where eight generations of his Acadian family had lived. One of the oldest points of exploration and settlement in the Americas, with a written history dating back to the first days of European discovery, Cape Breton is littered with remnants of old settlements. But that day Chiasson found a road that was unique. Well made and consistently wide, and at one time clearly bordered with stone walls, the road had been a major undertaking. But he could find no record of it. In the two years of detective work that followed, Chiasson systematically surveyed the history of Europeans in North America and came to a stunning conclusion: the ruins he had stumbled upon – an entire townsite on a mountaintop---did not belong to the Portuguese, the French, the English, or the Scots. And they predated John Cabot's 1497 "discovery" of the island. Using aerial and site photographs, maps and drawings, and his own expertise as an architect, Chiasson re-creates how he pieced together the clues to one of the world's great mysteries: a large Chinese colony existed and thrived on Canadian shores well before the European Age of Discovery. He addresses how the ruins had been previously overlooked or misunderstood, and how the colony was abandoned and forgotten, in China and in the New World. And he discovers the traces the colony left in the storytelling and culture of the Mi'kmaq, whose written language, clothing, technical knowledge, religious beliefs, and legends, he argues, expose deep cultural ties to China. A gripping account of an earth-shaking discovery, The Island of Seven Cities will change the way we think about our world.
