The complete technical manual and troubleshooting guide for motorhomes, travel trailers, fifth wheels, folding campers, truck campers, and vans--Notes.

An absorbing account of the record industry's worst nightmare. In the summer of 1969, Great White Wonder, a collection of unreleased Bob Dylan recordings appeared in Los Angeles. It was the first rock bootleg and it spawned an entire industry dedicated to making unofficial recordings available to true fans. Bootleg! tells the whole fascinating saga, from its underground infancy through the CD 'protection gap' era, when its legal status threatened the major labels' monopoly, to the explosion of trading via Napster and Gutella on MP-3 files. Clinton Heylin provides a highly readable account of the busts, the defeats and victories in court; the personalities - many interviewed for the first time for this book. This classic history has now been updated and revised to include today's digital era and the emergence of a whole new bootleg culture.

Healthcare in the U.S. faces two interpenetrating certainties. First, with over 66 racial and ethnic groupings, our "American Mosaic" of worldviews and values unavoidably generates clashes in hospitals and clinics. Second, our public increasingly mistrusts our healthcare system and delivery. One certainty fuels the other. Conflicts in the clinical encounter, particularly with patients from other cultures, often challenge dominant assumptions of morally appropriate principles and behavior. In turn, lack of understanding, misinterpretation, stereotyping, and outright discrimination result in poor health outcomes, compounding further mistrust. To address these cultural fault lines, healthcare institutions have initiated efforts to ensure "cultural competence." Yet, these efforts become institutional window-dressing without tackling deeper issues, issues having to do with attitudes, understanding, and, most importantly, ways we communicate with patients. These deeper issues reflect a fundamental, original fault line: the ever-widening gap between serving our own interests while disregarding the concerns of more vulnerable patients, those on the margins, those Others who remain disenfranchised because they are Other. This book examines this and how we must become the voice for these Others whose vulnerability and suffering are palpable. The author argues that, as a vital and necessary condition for cultural competency, we must learn to cultivate the virtue of Presence - of genuinely being there with our patients. Cultural competency is less a matter of acquiring knowledge of other cultures. Cultural competency demands as a prerequisite for all patients, not just for those who seem different, genuine embodied Presence. Genuine, interpersonal, embodied presence is especially crucial in our screen-centric and Facebook world where interaction is mediated through technologies rather than through authentic face-to-face engagement. This is sadly apparent in healthcare, where we have replaced interpersonal care with technological intervention. Indeed, we are all potential patients. When we become ill, we too will most likely assume roles of vulnerability. We too may feel as invisible as those on the margins. These are not armchair reflections. Brannigan's incisive analysis comes from his scholarship in healthcare and intercultural ethics, along with his longstanding clinical experience in numerous healthcare settings with patients, their families, and healthcare professionals.

Covers all aspects of RV living from choosing an RV and towing vehicles, to basic maintenance and cooking on the road.

Whether you're downsizing or thrill-seeking-or anything in between-find out if the RV lifestyle is right for you, and learn how to transition from a life of traditional home-ownership to one on the road. Do you love traveling? Meeting new people and seeing new places? Are you craving a life that feels meaningful and new? The RV lifestyle could be the answer. Both aspirational and practical, Living the RV Life is your ultimate guide to living life on the road-for people of all ages looking to downsize, travel, or work on the go. Learn if life in a motor home is right for you, with insightful details on the experiences of full-time RV-ers, tips for how to choose an RV (how big? new or used?), whether to sell your home (and if not, what to do with it), model costs, sample routes and destinations, basic vehicle maintenance, legal and government considerations-and much more! Written in a light and an easy-to-understand style, Living the RV Life is your bible to living a mobile life.

Zoonoses are currently considered as one of the most important threats for public health worldwide. Zoonoses can be defined as any disease or infection that is naturally transmissible from vertebrate or invertebrate animals to humans and vice-versa. Approximately 75% of recently emerging infectious diseases affecting humans are diseases of animal origin; approximately 60% of all human pathogens are zoonotic. All types of potential pathogenic agents, including viruses, parasites, bacteria and fungi, can cause these zoonotic infections. From the wide range of potential vectors of zoonoses, insects are probably those of major significance due to their abundance, high plasticity and adaptability to different kinds of pathogens, high degrees of synanthropism in several groups and difficulties to apply effective programs of population control. Although ticks, flies, cockroaches, bugs and fleas are excellent insects capable to transmit viruses, parasites and bacteria, undoubtedly mosquitoes are the most important disease vectors. Mosquito borne diseases like malaria, dengue, equine encephalitis, West Nile, Mayaro or Chikungunya are zoonoses with increasing incidence in last years in tropical and temperate countries. Vertebrates can also transmit serious zoonoses, highlighting the role of some carnivorous animals in rabies dissemination or the spread of rodent borne diseases in several rural and urban areas. Moreover, the significance of other food borne zoonoses such as taeniasis, trichinellosis or toxoplasmosis may not been underestimated. According to WHO, FAO and OIE guidelines an emerging zoonotic disease can be defined as a zoonosis that is newly recognized or newly evolved, or that has occurred previously but shows an increase of incidence or expansion in geographical, host or vector range. There are many factors that can provoke or accelerate the emergence of zoonoses, such as environmental changes, habitat modifications, variations of human and animal demography, pathogens and vectors anomalous mobilization related with human practices and globalization, deterioration of the strategies of vector control or changes in pathogen genetics. To reduce public health risks from zoonoses is absolutely necessary to acquire an integrative perspective that includes the study of the complexity of interactions among humans, animals and environment in order to be able to fight against these issues of primary interest for human health. In any case, although zoonoses represent significant public health threats, many of them still remain as neglected diseases and consequently are not prioritized by some health international organisms.
