Dulcie O'Neil is a fairy. And not the type to frolic in gardens. She's a Regulator—a law-enforcement agent who monitors the creatures of the Netherworld to keep them from wreaking havoc in the mortal world. When a warlock is murdered and Dulcie was the last person to see him alive, she must uncover the truth before she's either deported back to the Netherworld, or she becomes the next victim.

This collection of fresh essays on Suzanne Collins's epic trilogy spans multiple disciplines. The contributors probe the trilogy's meaning using theories grounded in historicism, feminism, humanism, queer theory, as well as cultural, political, and media studies. The essayists demonstrate diverse perspectives regarding Collins's novels but their works have three elements in common: an appreciation of the trilogy as literature, a belief in its permanent value, and a need to share both appreciation and belief with fellow readers. The 21 essays that follow the context-setting introduction are grouped into four parts: Part I "History, Politics, Economics, and Culture," Part II "Ethics, Aesthetics, and Identity," Part III "Resistance, Surveillance, and Simulacra," and Part IV "Thematic Parallels and Literary Traditions." A core bibliography of dystopian and postapocalyptic works is included, with emphasis on the young adult category—itsself an increasingly crucial part of postmodern culture.

This is the story of M. Francisco Fabrigas, explorer, philosopher, heretical physicist, who took a shipful of children on a frightening voyage to the next dimension, assisted by a teenaged Captain, a brave deaf boy, a cunning blind girl, and a sultry botanist, all the while pursued by the Pope of the universe and a well-dressed mesmerist. Dark plots, demonic cults, murderous jungles, quantum mayhem, the birth of creation, the death of time, and a creature called the Sweetie: all this and more waits beyond the veil of reality.

Evolutionary Algorithms (EAs) now provide mature optimization tools that have successfully been applied to many problems, from designing antennas to complete robots, and provided many human-competitive results. In robotics, the integration of EAs within the engineer's toolbox made tremendous progress in the last 20 years and proposes new methods to address challenging problems in various setups: modular robotics, swarm robotics, robotics with non-conventional mechanics (e.g. high redundancy, dynamic motion, multi-modality), etc. This book takes its roots in the workshop on "New Horizons in Evolutionary Design of Robots" that brought together researchers from Computer Science and Robotics during the IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS-2009) in Saint Louis (USA). This book features extended contributions from the workshop, thus providing various examples of current problems and applications, with a special emphasis on the link between Computer Science and Robotics. It also provides a comprehensive and up-to-date introduction to Evolutionary Robotics after 20 years of maturation as well as thoughts and considerations from several major actors in the field. This book offers a comprehensive introduction to the current trends and challenges in Evolutionary Robotics for the next decade.

There is no temperature below absolute zero, and, in fact, zero itself is impossible to reach. The quest to reach it has lured scientists for several centuries revealing interesting and unexpected phenomena along the way. Atoms move more slowly at low temperatures, but matter at barely above absolute zero is not immobile or even necessarily frozen. Among the most peculiar of matter's strange behaviors is superconductivity^{3/4} simply described as electric current without resistance^{3/4} discovered in 1911. With the 1986 discovery that, contrary to previous expectations, superconductivity was

possible at temperatures well above absolute zero, research into practical applications has flourished. Superconductivity has turned out to be a fruitful arena for developments in condensed matter physics, which have proved applicable in particle physics and cosmology as well. Cold Wars tells the history of superconductivity, providing perspective on the development of the field and its relationship with the rest of physics and the history of our time. The authors provide a rare look at the scientists and their research, mostly little known beyond a small coterie of specialists. Superconductivity provides an excellent example of the evolution of physics in the twentieth century: the science itself, its epistemological foundations, and its social context. Cold Wars will be of equal interest to students of physics and the history of science and technology, and general readers interested in story behind this remarkable phenomenon.

How does a foul-mouthed angel end up as the last hope for all of Heaven and Earth? When Seraph Emma is maimed and tossed from Heaven by a rogue angel who's taken charge, she fears she'll never be allowed to return. Tasked with the

impossible job of showing the self-loathing (and not even human!) Jason his worth, Emma is sure she's doomed to fail. Meanwhile, having wormed his way into Heaven, the corrupt Everett has trapped God in Hell and has designs on unleashing evil everywhere. Fortunately, if there's one thing Emma can't do (in addition to minding her language), it's give up. Determined to save Jason and get back to Heaven-even if it means going to Hell-Emma's plan is simple yet impossible: trick the Devil to save God. What she doesn't count on is the devotion and, well, humanity she finds in Jason; the spirit, hidden compassion, and raw sex appeal within the Devil; and the vulnerability of her own heart. With the help of two unlikely allies, she'll wage the battle for Heaven. But will Emma be sidetracked by a new sort of heaven along the way? What's truly more dangerous? Falling from Heaven, or falling in love? Debra Anastasia has twisted a fast-paced tale of intimate relationships with literally universal impact. Rich with humor and electrified by attraction, this novel offers a playfully off-beat take on the good and evil that make up the world.
