Introducing a NEW addition to our growing library of computer science titles, Algorithm Design and Applications, by Michael T. Goodrich & Roberto Tamassia! Algorithms is a course required for all computer science majors, with a strong focus on theoretical topics. Students enter the course after gaining hands-on experience with computers, and are expected to learn how algorithms can be applied to a variety of contexts. This new book integrates application with theory. Goodrich & Tamassia believe that the best way to teach algorithmic topics is to present them in a context that is motivated from applications to uses in society, computer games, computing industry, science, engineering, and the internet. The text teaches students about designing and using algorithms, illustrating connections between topics being taught and their potential applications, increasing engagement.

"Quantum Mechanics : An Accessible Introduction brings quantum mechanics to undergraduates in a thorough and uniquely approachable way. Designed from the ground up to address the changing needs of today's students, author Robert Scherrer carefully develops a solid foundation before developing more advanced topics. Introductory chapters explains the historic experimental evidence that motivated the emergence of quantum mechanics, and explain its central role in today's science and technology. Intuitive explanations of a quantum phenomenon provide clear physical motivation for the discussion that follow. Unique Math Interlude chapters ensure that the student has all the mathematical skills required to master quantum mechanics."--Page 4 de la couverture.

We should thank a pollinator at every meal. These diminutive creatures fertilize a third of the crops we eat. Yet half of the 200,000 species of pollinators are threatened. Birds, bats, insects, and many other pollinators are disappearing, putting our entire food supply in jeopardy. Protecting Pollinators breaks down the latest science on environmental threats and takes readers inside the most promising conservation efforts. Efforts range from cities creating butterfly highways to citizen scientists monitoring migration. Along with inspiring stories of revival and lessons from failed projects, readers will find practical tips to get involved. And they will be reminded of the magic of pollinators--the iconic monarchs, dainty hummingbirds, and homely bats alike who bring food to our tables.
