The  
"A Dynamical Theory of  
the Electromagnetic  
Field" is a paper by James

Clerk Maxwell on  
electromagnetism,  
published in 1865. In the  
paper, Maxwell derives  
an electromagnetic wave  
equation with a velocity  
for light in close  
agreement with  
measurements made by  
experiment, and deduces

Abstract. In this work a  
generalized dynamical  
theory of thermoelasticity

is formulated using a

form of the heat

transport equation which

includes the time needed

for acceleration of the

heat flow. The theory

takes into account the

coupling effect between

temperature and strain

rate, but the resulting

Dynamical

In 1865 he published this work, "A Dynamical Theory of the Electromagnetic Field" demonstrating that electric and magnetic fields travel through space as waves moving at the speed of light. He proposed that light is an undulation in the same medium that is the cause of electric and magnetic phenomena.
