New data demonstrate that HLA matching also significantly prolongs the survival of corneal grafts. The reasons for the late recognition of the significance of HLA matching in corneal transplantation are on the one hand the immune privilege of the eye, which allows corneal transplantation under certain conditions without immunosuppressive therapy, and on the other hand highly erroneous serological typing.

Prophylaxis through matching for human
leukocyte antigens (HLA) is controversial. We
herein report the results of the Functional
ANTigen matChing in keratoplastY (FANCY)
trial. Methods: FANCY was a randomized,

File Type PDF Adequate Hla Matching In Keratoplasty Developments In

double-blind, multicenter clinical trial. The primary objective was to evaluate superiority of HLA matching versus random graft assignment.
