In the fast correction scheme, the spark advance is decreased for the next engine cycle by a fixed amount (e.g., 5 degrees) whenever knock is detected.

Then, the spark advance is incremented in one-

File Type PDF

Advance

~~Control Engine~~
degrees increments every 5–20 crankshaft revolutions. The fast correction ensures that minimum time is spent under heavy knocking conditions.

(intake, vacuum, throttle position, etc.)
Centrifugal Advance .
Centrifugal advance makes the ignition coil and spark plugs fire sooner as engine speed increases, using spring-loaded weights, centrifugal force, and lever action to rotate the distributor cam or trigger wheel.

File Type PDF

Advance

Control Engine

~~Centrifugal Advance~~

~~tpub.com~~

- Centrifugal advance if so equipped – typically up to 20 degrees before TDC, added with engine speed; more advance with high engine speed
- Vacuum advance can change advance by up to 10 degrees. Typically,

File Type PDF

Advance

advance is added with engine vacuum; more advance usually at low engine speed. Electronic limiting of ignition timing is also added for smog control requirements. More recent electronic ignitions modulate spark advance for different driving conditions.
