Acquired immune deficiency syndrome or acquired immunodeficiency syndrome (AIDS) is a disease of the human immune system caused by the human immunodeficiency virus. This condition progressively reduces the effectiveness of the immune system and leaves individuals susceptible to opportunistic infections and tumours. The symptoms of AIDS are primarily the result of conditions that do not normally develop in individuals with healthy immune systems. AIDS was first reported on June 5, 1981, AIDS stigma exists around the world in a variety of ways, including ostracism, rejection, discrimination and avoidance of HIV infected people; compulsory HIV testing without prior consent or protection of confidentiality; violence against HIV infected individuals or people who are perceived to be infected with HIV; and the quarantine of HIV infected individuals. The most important way to change risky behaviour is health education. Education itself does not work, only it leads to higher health literacy and general cognitive ability. Education is the best investment, any society can make for the health and well-being of its children, as well as its economic and social progress. Education is development. It creates choices and opportunities for people, reduces the twin burdens of poverty and diseases and gives a stronger voice in society. The book aims to provide the fundamental aspects of education in HIV/AIDS.

This handbook has been developed to support health educators, community workers, teachers and parents in their efforts to protect the African American people from the scourge of HIV/AIDS. The primary target of the hand book are teenagers/youth and other African American persons who are the less fortunate components of our society, because it is this population that is most susceptible to this scourge. However suggestions included here in apply virtually to all populations especially culturally different people such as Hispanic etc. Prevention of HIV/AIDS among adults helps to maintain an enlightened parent population prevents AIDS transmitted from the older to the younger generation as in some communities, the elder people are involved in sexual relationships with young adolescents. The authors commend organizations and individuals such as Bill and Melinda Gates, Honble

U.S. President Barack Obama and former US president they funded billions of dollars to offer treatment of HIV/AIDS infected people and for education of people most susceptible to HIV infection. This hand book titled Strategies for Awareness and its Prevention of HIV/AIDS Among African American (Mehta and Kalra) compliments these efforts with the hope that its contents when followed may reduce the spending required to arrest the HIV/AIDS cases and make the funds available for educational projects that impact lifestyle so that spread is stopped and menace of HIV/ AIDS epidemic among African American is reversed. Some of the suggestions have been adapted from Prof. Kalra and Prof. Sutman book titled WORLD PERSPECTIVE ON HIV /AIDS for the less fortunate with their due permission.

Seminar paper from the year 2004 in the subject English Language and Literature Studies - Literature, grade: 2,0, University of Cologne (Englisches Seminar), 10 entries in the bibliography, language: English, abstract: The following paper deals with AIDS in Literary History and the influence in different media with the focus on creative writing. The paper is divided into two parts whereas the first main part represents the development of that topic through literature. In a first step there will be given a general definition of what is meant by the term media and what we are talking about when referring to them. I concentrate on the medium literature which is mentioned in the topic of this paper. After the description of the beginning in the 1980s the development of AIDS Literature and its extension through literature basically concerning the 1990s will be outlined. The extension through 1980 – 1989 is disposed by the date of publication. The number of creative AIDS writings that highly increased from 1990s until today are arranged according to their literary category in which they appear. These include novels, both biographical and autobiographical style, poems and collections. The question why people write about AIDS will be discussed in the next step of the paper. With reference to feelings of HIV infected people reasons and effects will be analysed more concrete. Furthermore there will be some words on AIDS Literature and Extension today, even if the disease is not that present today as it was in the 1990. To close the circle and come back to the topic of the paper, I present a certain medium that gives AIDS a voice. The second part of this paper consists of an interview given by a HIV infected person called Horst-Johann Peters who also suffered from AIDS and lost his partner in 1995. On the one hand the interview expresses the motivation of being an AIDS activist and represents several feelings that lead to this commitment. On the other hand the interview can be found as a category in different media and is therefore a special part of literature. This paper focuses on literature to give an overview how complex creative AIDS writing in Literary History appears to this day. To be responsive to all other sorts of media mentioned in the table would therefore go beyond the scope.

Updated throughout with the latest findings on the AIDS virus, the Seventh Edition provides readers with the most current information available on the biology of the virus and the impact it has on society. The Seventh Edition of this best-selling text provides readers with a solid overview of AIDS from both a biomedical and a psychosocial perspective. The authors cover the molecular and cellular aspects of the virus and the immune system's response to it, and examine epidemiology and its role in understanding HIV and AIDS. The use of understandable vocabulary and clear illustrations, along with updated biomedical data and the most current statistics on AIDS available, makes AIDS: Science and Society an engaging resource for students, researchers, and general readers. Key Features: -Revised data throughout on the immune system and its response to new antigens. -New content on the mutation and evolution of HIV during infection -The latest data on research towards a cure and the treatment of infected individuals -Includes current epidemiological data throughout

This comprehensive review examines the biological, medical, social, historical, and political aspects of HIV/AIDS. • Original stories about living with HIV penned by HIV-positive patients • "Thought Boxes" and questions for discussion to challenge learners to think broadly and apply material presented in the book to other areas • Case studies from China, Africa, and India • Photographs taken by the author doing HIV work in Africa • A chronology that traces the HIV epidemic from its discovery a quarter century ago

Graphs and b&w photos.

If you began asking questions about AIDS, you would probably find that you could get some useful answers about the disease from someone you know - a parent, teacher, friend, or sibling. But you need to know more than just a little about AIDS (acquired immunodeficiency syndrome) and the virus that causes it, HIV (human immunodeficiency virus). You need to know what to do to protect yourself
