With the supposed shortening of our attention spans, what future is there for fiction in the age of the internet? Contemporary Fictions of Attention rejects this discourse of distraction-crisis which suggests that the future of reading is in peril, and instead finds that contemporary writers construct 'fictions of attention' that find some value in states or moments of inattention. Through discussion of work by a diverse selection of writers, including Joshua Cohen, Ben Lerner, Tom McCarthy, Ali Smith, Zadie Smith, and David Foster Wallace, this book identifies how fiction prompts readers to become peripherally aware of their own attention. Contemporary Fictions of Attention locates a common interest in attention within 21st-century fiction and connects this interest to a series of debates surrounding ethics, temporality, the everyday, boredom, work, and self-discipline in contemporary culture.

"Lost Causes stages a polemical intervention in the discourse that grounds queer civil rights in etiology -- that is, in the cause of homosexuality, whether choice, "recruitment," or biology. Reading etiology as a narrative form, political strategy, and hermeneutic method in American and British literature and popular culture, it argues that today's gay arguments for biological determinism accept their opponents' paranoia about what Rohy calls "homosexual reproduction"--that is, nonsexual forms of queer increase-preventing more complex ways of considering sexuality and causality. This study combines literary texts and psychoanalytic theory--two salient sources of etiological narratives in themselves -- to reconsider phobic tropes of homosexual reproduction: contagion in Borrowed Time, bad influence in The Picture of Dorian Gray, trauma in The Night Watch, choice of identity in James Weldon Johnson's Autobiography of an Ex-Colored Man, and dangerous knowledge in The Well of Loneliness. These readings draw on Lacan's notion of retroactive causality to convert the question of what causes homosexuality into a question of what homosexuality causes as the constitutive outside of a heteronormative symbolic order. Ultimately, this study shows, queer communities and queer theory must embrace formerly shaming terms -- why should the increase of homosexuality be unthinkable? -- while retaining the critical sense of queerness as a non-identity, a permanent negativity"--

A provocative account of the philosophical problem of 'difference' in art history, Tintoretto's Difference offers a new reading of this pioneering 16th century painter, drawing upon the work of the 20th century philosopher Gilles Deleuze. Bringing together philosophical, art historical, art theoretical and art historiographical analysis, it is the first book-length study in English of Tintoretto for nearly two decades and the first in-depth exploration of the implications of Gilles Deleuze's philosophy for the understanding of early modern art and for the discipline of art history. With a focus on Deleuze's important concept of the diagram, Tintoretto's Difference positions the artist's work within a critical study of both art history's methods, concepts and modes of thought, and some of the fundamental dimensions of its scholarly practice: context, tradition, influence, and fact. Indicating potentials of the diagrammatic for art historical thinking across the registers of semiotics, aesthetics, and time, Tintoretto's Difference offers at once an innovative study of this seminal artist, an elaboration of Deleuze's philosophy of the diagram, and a new avenue for a philosophical art history.

As corroborated by the never-sagging and even increasing interest within the last decade, the intuitive attraction of "True 3D" in geodata presentation is well worth covering its current status and recent developments in a compendium like the present one. It covers most aspects of (auto-) stereoscopic representation techniques of both topographic and thematic geodata, be they haptic or not. Theory is treated as well as are many fields of concrete applications. Displays for big audiences and special single-user applications are presented, well-established technologies like classical manual fabrication of landscape reliefs contrast with cutting-edge developments

Events: The Force of International Law presents an analysis of international law, centred upon those historical and recent events in which international law has exerted, or acquired, its force. From Spanish colonization and the Peace of Westphalia, through the release of Nelson Mandela and the Rwandan genocide, and to recent international trade negotiations and the 'torture memos', each chapter in this book focuses on a specific international legal event. Short and accessible to the non-specialist reader, these chapters consider what forces are put into play when international law is invoked, as it is so frequently today, by lawyers, laypeople, or leaders. At the same time, they also reflect on what is entailed in naming these 'events' of international law and how international law grapples with their disruptive potential. Engaging economic, military, cultural, political, philosophical and technical fields, Events: The Force of International Law will be of interest to international lawyers and scholars of international relations, legal history, diplomatic history, war and/or peace studies, and legal theory. It is also intended to be read and appreciated by anyone familiar with appeals to international law from the general media, and curious about the limits and possibilities occasioned, or the forces mobilised, by that appeal.
