Aristotle was an ancient Greek philosopher who contributed to the foundation of both symbolic logic and scientific thinking in Western philosophy. He also made advances in the branch of philosophy known as metaphysics, moving away from the idealism of his mentor Plato to a more empirical and less mystical view of the nature of reality.

Aristotle regarded psychology as a part of natural philosophy, and he wrote much about the philosophy of mind. This material appears in his ethical writings, in a systematic treatise on the nature of the soul (*De anima*), and in a number of minor monographs on topics such as sense-perception, memory, sleep, and dreams.

Like his master, Aristotle wrote initially in dialogue form, and his early ideas show a strong Platonic influence. His dialogue *Eudemus*, for example, reflects the Platonic view of the soul as imprisoned in the body and as capable of a happier life only when the body has been left behind. According to Aristotle, the dead are more blessed and happier than the living, and to die is to return to one ' s real home.

Like his teacher Plato, Aristotle's philosophy aims at the universal. Aristotle's ontology places the universal (*katholou*) in particulars (*kath' hekaston*), things in the world, whereas for Plato the universal is a separately existing form which actual things imitate.

Aristotle (384–322 B.C.E.) numbers among the greatest philosophers of all time. Judged solely in terms of his philosophical influence, only Plato is his peer: Aristotle's works shaped centuries of philosophy from Late Antiquity through the Renaissance, and even today continue to be studied with keen, non-antiquarian interest.

Aristotle, as a philosopher, is in many ways very different from all his predecessors. He is the first to write like a professor: his treatises are systematic, his discussions are divided into heads, he is a professional teacher, not an inspired prophet. His work is critical, careful, pedestrian, without any trace of Bacchic enthusiasm. ...

In Aristotle's time, philosophy included natural philosophy, which preceded the advent of modern science during the Scientific Revolution. The works of Aristotle were initially defended by the members of the Peripatetic school and later on by the Neoplatonists, who produced many commentaries on Aristotle's writings.
