Jane Austen distinguished herself with genius in literature, but she was immersed in all of the arts. Austen loved dancing, played the piano proficiently, meticulously transcribed piano scores, attended concerts and art exhibits, read broadly, wrote poems, sat for portraits by her sister Cassandra, and performed in theatricals. For her, art functioned as a social bond, solidifying her engagement with community and offering order. And yet Austen's hold on readers' imaginations owes a debt to the omnipresent threat of disorder that often stems—ironically—from her characters' socially disruptive artistic sensibilities and skill. Drawing from a wealth of recent historicist and materialist Austen scholarship, this timely work explores Austen's ironic use of art and artifact to probe selfhood, alienation, isolation, and community in ways that defy simple labels and acknowledge the complexity of Austen's thought.

The neutrino is the most fascinating elementary particle due to its elusive nature and outstanding properties that have attracted the interest of generations of physicists since 1930, when it was first postulated by Wolfgang Pauli as a "desperate remedy" to explain the apparent energy violation in the beta decay. Many fundamental discoveries in particle physics had the neutrino involved in one way or another. To date, neutrino physics is still one of the hottest topics of modern particle physics. Key experiments and significant theoretical developments have contributed in building up what we can call now the Standard Model of Neutrino Physics. The aim of the book is to provide graduate students and young researchers a comprehensive tutorial in modern neutrino physics, specially tailored with emphasis on the educational aspects. It provides an overview of the basics and of recent achievements in the field, from both experimental and theoretical points of view. Contents: Preface A Brief History of Neutrino (A Bettini) Introduction to the Formalism of Neutrino Oscillations (G Fantini, A G Rosso, V Zema and F Vissani)

Neutrino Oscillation Detectors and Methods (D Autiero) Solar Neutrinos and Matter Effects (A Y Smirnov) Atmospheric Neutrinos (K Okumura) Probing the Atmospheric Sector with Accelerator Experiments (C Pistillo and C Wilkinson) The Measurement of  $\theta_{13}$  with Reactors and Accelerators (F Di Lodovico) Neutrinos from Supernovae and Other Astrophysical Sources (K Scholberg) High-Energy Astrophysical Neutrinos (F Halzen) Sterile Neutrinos: An Introduction to Experiments (J Conrad and M Shaevitz) Dirac and Majorana Neutrinos, Double Beta Decay (J-L Vuilleumier) Low-Energy Neutrino Interactions (A M Szelc) Theory and Phenomenology of Mass Ordering and CP Violation (P Coloma and S Pascoli) Beyond the Neutrino Standard Model (J D Lykken) Readership: Students and researchers interested in high energy physics and/or astrophysics. Keywords: Neutrino; Neutrino Masses; Neutrino Oscillations; Neutrino Properties; Neutrino Sources; Neutrino Detectors; Massive Neutrinos Review: Key Features: Mix of tutorial and review articles Comprehensive review of the main aspects in one single book The various topical chapters are written by experts in the field

Essays highlight the interplay between opera, art and ideology across three centuries. Three broad themes are opened up from a variety of approaches: nationalism, cosmopolitanism and national opera; opera, class and the politics of enlightenment; and opera and otherness.
