The Allen Mouse Brain Atlas includes a full-color, high-resolution anatomic reference atlas accompanied by a systematic, hierarchically organized taxonomy of mouse brain structures. In 2011, the reference atlas was updated to enable interactive online exploration of the atlas and to provide a deeper level of 3-D annotation for informatics analysis and viewing in the Brain Explorer® 3-D viewer.

The Atlas, a 3D recreation of every cell in the mouse brain, is the work of the Swiss EPFL ' s Blue Brain Project, a vast effort with the goal of digitally reconstructing and simulating the mouse brain and ultimately, the human brain. The Project is directed by Prof. Henry Markram, who also founded the European Human Brain Project.

We have here established a molecular atlas of the adult mouse brain exclusively on the basis of unsupervised classification of ST patterns on a whole-brain scale. A challenge in neuroscience has...

Molecular atlas of the adult mouse brain | Science Advances

We describe here an anatomically comprehensive digital atlas containing the expression patterns of approximately 20,000 genes in the adult mouse brain. Data were generated using automated high-throughput procedures for in situ hybridization and data acquisition, and are publicly accessible online.

Genome-wide atlas of gene expression in the adult mouse brain

The Allen Mouse Brain Connectivity Atlas is a comprehensive database of high-resolution images of axonal projections originating from distinct anatomical regions of wild-type mouse brains or from various genetically labeled cell populations in individual brain regions of Cre-driver mice. Briefly, to create the atlas, each mouse brain was injected with an enhanced green fluorescent protein (EGFP)-expressing adeno-associated virus (AAV) as an anterograde viral tracer into a particular brain ...
