The International Conference on Informatics and Management Science (IMS) 2012 will be held on November 16-19, 2012, in Chongqing, China, which is organized by Chongqing Normal University, Chongqing University, Shanghai Jiao Tong University, Nanyang Technological University, University of Michigan, Chongqing University of Arts and Sciences, and sponsored by National Natural Science Foundation of China (NSFC). The objective of IMS 2012 is to facilitate an exchange of information on best practices for the latest research advances in a range of areas. Informatics and Management Science contains over 600 contributions to suggest and inspire solutions and methods drawing from multiple disciplines including: Computer Science Communications and Electrical Engineering Management Science Service Science Business Intelligence

This book features selected papers presented at Third International Conference on Nanoelectronics, Circuits and Communication Systems (NCCS 2017). Covering topics such as MEMS and nanoelectronics, wireless communications, optical communication, instrumentation, signal processing, Internet of Things, image processing, bioengineering, green energy, hybrid vehicles, environmental science, weather forecasting, cloud computing, renewable energy, RFID, CMOS sensors, actuators, transducers, telemetry systems, embedded systems, and sensor network applications in mines, it is a valuable resource for young scholars, researchers, and academics.

High-Level Power Analysis and Optimization presents a comprehensive description of power analysis and optimization techniques at the higher (architecture and behavior) levels of the design hierarchy, which are often the levels that yield the most power savings. This book describes power estimation and optimization techniques for use during high-level (behavioral synthesis), as well as for designs expressed at the register-transfer or architecture level. High-Level Power Analysis and Optimization surveys the state-of-the-art research on the following topics: power estimation/macromodeling techniques for architecture-level designs, high-level power management techniques, and high-level synthesis optimizations for low power. High-Level Power Analysis and Optimization will be very useful reading for students, researchers, designers, design methodology developers, and EDA tool developers who are interested in low-power VLSI design or high-level design methodologies.

Volume is indexed by Thomson Reuters CPCI-S (WoS). The goal of "Manufacturing Automation Technology Development" is to exchange experiences and information in teaching and research, to explore the development of the subject, to maintain the standards of the subject, to raise the levels of teaching and research and to promote the development of manufacturing automation technology.

My first encounter with acronyms took place when I was ten years old and growing up in an occupied country during the Second World War. My father proudly announced one day that, despite the ban imposed by the occupying administration, he had managed to get a radio installed and could receive the BBC. (All acronyms used in this introduction are listed in this dictionary.) To me the meaning of "BBC" was that we would receive different information about the war than we got from the usual censored broadcasts. There was, of course, the well-known acronym associated with the NT, but at that time I did not realize that it meant more than the postal service, in those years a deteriorated service. Gradually the daily use of acronyms grew. Most of the newly acquired three- and four-letter abbreviations referred to organizations, such as the broadcasting corporations in The Netherlands and Belgium, and references to countries such as the USA, USSR, and UK. When attending high school (the HBS) after the war, my knowledge of acronyms grew slowly. Even during the ten years I spent in the Dutch Merchant Marine (the GHV), the number of acronyms was limited to advanced equipment that eventually became known as RADAR, LORAN, and DECCA.

The Universal Product Code (U.P.C.) is now so commonplace that few pause to notice or to ponder it. The small rectangle of black and white bars that embodies the U.P.C. adorns virtually every item we purchase in the supermarket, discount store, or shopping mall - and we take it for granted. Yet twenty-five years ago, the U.P.C. was no more than an idea shared by a small cadre of manufacturing and chain store executives. Here Stephen A. Brown, the legal counsel of those pioneering executives, traces the origin and development of the U.P.C. The sheer success of the Code should make this account of interest to those who would understand the dynamic of technology and business. The development of the U.P.C. illustrates the process of setting
