Statistics for Social and Behavioral Sciences presents the concepts, principles, and methods used in performing many nonparametric procedures. It also demonstrates practical applications of the most common nonparametric procedures using

software. This text is the only current nonparametric book written specifically for students in the behavioral and social sciences.

Emphasizing sound research designs, appropriate statistical analyses, and accurate interpretations of

Explains a conceptual framework for each statistical procedure  
Presents examples of relevant research problems, associated research questions, and hypotheses that precede each procedure  
Details SPSS paths for conducting various analyses  
Discusses

the interpretations of statistical results and conclusions of the research. With minimal coverage of formulas, the book takes a nonmathematical approach to nonparametric data analysis procedures and shows students how they are used in research contexts.
