been widely discussed. We investigate how to apply benevolent deception on exergame design, to verify the possibility of using benevolent deception as a fitness incentive in gym. We developed a set of basic design principles, as promoting fitness by lies is an unusual and dangerous design attempt. Taking the spinning cycle game as an example, we try to introduce benevolent deception into the interactive game design of aerobic exercise.

Pages. A practice commonly used in the medical field, “benevolent deception” is the act of physicians suppressing information about diagnoses in hopes of not causing patients emotional turmoil (Skloot 63). Benevolent deception is a contentious subject because when used, the bioethical principles of respect for autonomy and beneficence can conflict with each other.
