The first thing we must do is to remove the stigma. We have to make it OK to talk about it openly, with no fear of judgement or blame or shame. Until we can talk about the issues and why they happen, those who have the capacity to fund services and training simply won't be able to see that there is any need. Then we have to find solutions.

Imagine being blamed for having cancer. It's unthinkable! But whilst physical illness usually evokes a positive, sympathetic response, people frequently react to mental illness in a dismissive, alienating, even scornful manner. No-one who is mentally ill should ever feel the need to apologise for it. But too often, fear and ignorance lead to a sufferer being marginalised and ostracised by friends, neighbours, family and work colleagues. Despite mental health disorders being so common - one in four people will suffer from mental illness at some point in their life - it continues to carry a social stigma. The consequent loss of jobs, friendships and marriages compounds emotional pain, adds to the sense of shame, isolation and desperation and makes recovery more difficult. Time To Change (to which all profits from this book will be donated) and other charities worldwide are campaigning vigorously to change public attitudes, helping to inform about mental health issues and making it more acceptable to speak about them. Brazilian author, Paulo Coelho, wrote: 'Each person knows the extent of their own suffering...'. In this book fifteen courageous people of varying ages, nationalities and backgrounds tell us insightfully, openly and honestly in their own words about the distressing, stark reality of living with mental illness. And their experiences reveal the immensely damaging impact of others' reactions. By the time you have finished reading these heartfelt and powerfully-expressed stories you will be better able to understand what it's like to have mental health difficulties.

People with mental illness are often stigmatized, both in the U.S. and around the world. Paradoxically, many in the mental health professions are themselves the source of a great deal of such stigma. Theoretical models in psychology and psychiatry have often blamed family members for causingsmental illness, and too many practitioners and scientists hold to "us versus them" attitudes, showing extreme reluctance to admit personal and family experiences of mental illness.In Living with Mental Illness, mental health professionals and scientists, ranging from newly trained individuals to seasoned clinicians and researchers, tell their own and their families' stories of mental disorder, providing an unprecedented level of honesty and disclosure. The volume presentsmoving and inspiring narratives of serious mental disorder in individuals who have decided to focus their careers on mental illness in others. The editor, who has previously disclosed his own family's struggles with his father's lifelong, misdiagnosed bipolar disorder, utilizes his own experienceto integrate, synthesize, and provide perspective on these revealing contributions. Through both personal narratives and accounts of parents, siblings, or offspring, the contributors convey the serious impairments that can accrue to those with mental illness, the strength and courage that emanatefrom such experiences, and the ways in which these experiences have contributed to their own decisions to enter the mental health field.Providing a humanizing portrayal of mental disorder, this volume will be indispensable reading for those in the mental health professions, trainees across many related fields, family members, persons contending with mental illness, and all those who wish to know more about the effects of mentalillness on our society. Its stark stories of pain and impairment, and its clear messages of hope and courage, will inspire those working in the mental health professions, as well as their clients, for years to come.

"Written for those suffering from Lyme disease, especially chronic Lyme, and their families and friends, Suffering the Silence provides a sensitive, human look at the illness and the struggle its patients face in finding recognition and treatment."

Like most of the nation, Liza Long spent 14 December 2012, mourning the victims of the Newtown shooting at the hands of mentally ill Adam Lanza. Long is also the mother of a child with a mental illness, and she wondered: What if my son does that someday? Powerful and shocking, The Price Of Silence looks at how society stigmatizes mental illness - including in children - and the devastating societal cost. In the wake of repeated acts of mass violence, Long draws from her experience of dealing with a mentally ill child to point the way forward.'

Mental illness impacts at least a quarter of all blessed unions. In this new book by the author of Blessed are the Crazy, Sarah Griffith Lund opens up about depression and post-traumatic stress disorder in her own marriage and shares stories of other couples who have been impacted by mental illnesses such as addiction, anxiety, autism spectrum disorder, bipolar disorder, eating disorders, obsessive compulsive disorder, postpartum depression, schizophrenia, suicidality, and more. Using traditional marriage vows as a framework for the book, Blessed Union explores the challenges of loving in the midst of mental health challenges, why it happens, what we can do about it, and how our faith is connected to mental illness. This book reminds us that we are not alone and invites us to break the silence around marriage and mental illness. Book includes a guided journal section, with a dozen blank pages and prompts for deeper reflection.

The latest statistics tell us that one out of three girls and one out of six boys will be sexually abused before the age of eighteen, destroying their lives in ways we can't even imagine. We also know that 90 percent of the time, victims know their abuser. Daniel Pearse is living proof of both these statistics. He and his brother were sent to live with a pedophile after their mother died. For nine years, Daniel suffered sexual, physical, emotional, mental, and verbal abuse at the hands of his tormentor. Like many abused children, Daniel then suffered in silence for decades as an adult. Now, he's committed to stopping the cycle of abuse that causes so much pain. ¶ Breaking the Cycle of Silence proposes age-appropriate sexual abuse training and education in schools. It teaches children what is appropriate, shows adults the signs of abuse to look for, and offers sources of support for victims. With such training and education, we can identify and stop abusers, preventing them from claiming victim after victim for years.

"Families are riddled with untold secrets. But Stephen Hinshaw would have never thought that in his family a profound secret had been kept under lock and key for 18 years. From the moment his father revealed his long history with mental illness and involuntary hospitalizations, Hinshaw knew his life would be changed forever. Hinshaw calls his father's reveal "psychological birth"--after years of experiencing the ups and downs of his father's illness without knowing it existed, watching him disappear for weeks at a time only to return as the loving father he had always known, everything he experienced as a child began to make sense. He learned as much as possible about his father's illness, and what began as an exploration into his father's past and mental health turned into a full-fledged career as a clinical psychologist. In Another Kind of Madness, Hinshaw explores the burden of living in a family "loaded" with mental illness and debunks the "stigma" behind it, explaining that in today's society, mental health problems can result in a loss of a driver's license, inability to vote or run for office, ineligibility for jury service, or automatic relinquishment of child custody. With a moving personal narrative and shocking facts about how America views mental health conditions in the 21st century, Another Kind of Madness is a passionate call to arms regarding the importance of destigmatizing mental illness"--
