Chemosensory dysfunction is a quite frequently occurring problem which significantly affects the patient's quality of life. It can result from infectious agents, environmental factors, toxins, traumatic brain injuries, as well as neurodegenerative diseases. This publication provides up-to-date articles on the chemical senses including the olfactory, trigeminal and gustatory systems. The vomeronasal system and its potential significance in humans is also discussed. Based on recent functional imaging data, the book provides an overview on how the 'lower senses' function, how they work together, for example to produce flavor, how they can be damaged and repaired, and how the function of human chemical senses can be assessed. The publication focuses on chemosensory dysfunction and pays particular attention to taste and its disorders. Renowned experts in their fields of research have contributed their findings to this topical update on chemosensory disorders and made this volume indispensable reading for otorhinolaryngologists and neurologists.

This book gives a comprehensive overview of the symptoms, causes and treatment of Burning Mouth disease and Burning Mouth-like diseases. Burning mouth disease (BMD), also referred to as burning mouth syndrome, is an enigmatic disease for both the patient and the clinician. When the disease is not recognized as such, the patient may become exposed to a wide variety of redundant treatments, including dental and surgical procedures. The text is science-based including literature from the past decades as well as practice-oriented containing treatment guidelines established on personal experience from the author. Much attention is paid to the symptoms of various diseases that may mimic those of BMD. Neurologic and psychogenic aspects are well covered, as are the many treatment modalities, such as pharmacological and nonpharmacological ones. Step-by-step approaches are outlined in this book to help make an apparently unbearable disease more or less acceptable to live with. This monograph will be of help for all dental and medical healthcare providers who are involved in the diagnosis and management of patients suffering from BMD and BMD-like symptoms.

Burning mouth syndrome (BMS) has been considered an enigmatic condition because the intensity of pain rarely corresponds to the clinical signs of the disease. Various local, systemic and psychological factors are associated with BMS, but its etiology is not fully understood. Also there is no consensus on the diagnosis and classification of BMS. A substantial volume of research has been focused on BMS during the last two decades. Progress has been made but the condition remains a fascinating, yet poorly understood area, in the field of oral medicine. Recently, there has been a resurgence of interest in this disorder with the discovery that the pain of BMS may be neuropathic in origin and originate both centrally and peripherally.

"Burning Mouth Syndrome (BMS): Etiopathogenesis, Clinical presentation, Diagnosis, Treatment/Management etc. " Burning mouth syndrome (BMS) is a chronic debilitating oral condition characterized by a burning sensation of the oral mucosa in an otherwise apparently normal person. The etiology and pathogenesis are obscure, but both psychogenic factors and peripheral and central neuropathies appear to be implicated. There is no cure for BMS, and treatment with either local or systemic medications focuses on the relief of symptoms and on improving quality of life. In recalcitrant cases, psychological/psychiatric intervention may be helpful. The pathogenesis of BMS is complex involving psychogenic factors and dysregulated peripheral and central pain pathways. Genetic factors determining the function of neural pain pathways may play an important role in individual susceptibility to BMS, and while there is no standard treatment protocol for its management, both drugs and psychological services may be required In order to improve treatment outcomes, a better understanding of the pathogenesis of this syndrome might provide a basis for the development of more effective management strategies. Hence, an effort has been made in this informative E-Booklet to discuss the current knowledge of the Etiopathogenesis, Symptoms /Signs, Investigations, Diagnosis, Treatment/ Effective Management strategies etc. for both types of Burning Mouth Syndrome (BMS). □Dr. H.
