practical guidelines to sampling procedures, slide preparation, and interpretation leading to diagnoses and/or classification of the cytologic findings. Comprehensive coverage of all body systems and body fluids - and the pathological changes associated with various infectious agents - emphasizes areas in which the application of cytology has the greatest diagnostic value. Exceptional-quality, full-color photomicrographs show both normal and abnormal tissue and also include detailed legends. Discussions of clinical, differential, and cytological diagnosis accompany the illustrations of lesions and conditions in each chapter. Helpful hints for improving specimen quality are provided in discussions of common errors and problems encountered in the preparation of cytological specimens. Coverage of histology in organ system chapters demonstrates the histological or histopathologic corollary of cytologic findings. Clear, concise descriptions include sampling techniques, slide preparation and examination, and guidelines for interpretation, leading to accurate in-house and commercial laboratory diagnosis. Easy-to-use, well-organized format includes many tables, algorithms, boxes, and Key Point callouts for at-a-glance reference. A concise and practical visual guide to normal cell identification for all those dealing with cytology in the dog and cat. Normal Cell Morphology in Canine and Feline Cytology: An Identification Guide takes a uniquely visual approach to normal cell identification in dogs and cats. Single-page presentations offer vivid snapshots of particular cell types, with high quality microphotographs matched with annotated schematic diagrams and accompanying explanatory text.

Providing a vital understanding of what normal cells look like, this text is ideal for all those in small animal veterinary practice examining cytology samples. The book begins with a concise, yet comprehensive introduction to the principles of morphological identification, followed by a description of the distribution of cells and where different cell types can be sampled from in the various tissues and organs. The main part of the book is devoted to describing each cell type and its characteristics.

Cytoarchitectures, observed non-cellular material and general pathological changes are also described.

Offers a unique alphabetically organised visual guide to each cell type, covering cells from every type of organ and system Features an abundance of full-colour microphotographs accompanied by beautifully rendered schematic diagrams, making cell

identification quick and easy Includes a visual index for ultimate ease of navigation at the microscope

This book offers a state-of-the-art, evidence-based reference to all aspects of veterinary cytology. Truly multidisciplinary in its approach, chapters are written by experts in fields ranging from clinical pathology to internal medicine, surgery, ophthalmology, and dermatology, drawing the various specialties together to create a comprehensive picture of cytology's role in diagnosis and treatment of animal disease. Firmly grounded in the primary literature, the book focuses on companion animals, with special chapters for species with fewer publications. Chapters are logically organized by body system, with additional chapters on tumors of particular import and diagnostic decision making. The first two sections of *Veterinary Cytology* focus on cytology techniques, quality control, and special laboratory techniques. Subsequent sections are organ/tissue-based and reflect what is known about the canine, feline, and equine species. This is followed by chapters on non-traditional species, including exotic companion mammals, rabbits, cattle, camelids, non-human primates, reptiles and birds, amphibians, fish, invertebrates, and sheep and goats. The last section highlights some unique features of the applications of cytology in industry settings.
