It is 1953 in Canvey Island. Len and Violet are at a dance. Violet's husband George sits and watches them sway and glide across the dance floor, his mind far away, trapped by a war that ended nearly ten years ago. Meanwhile, at home, a storm rages and Len's wife Lily and his young son Martin fight for their lives in the raging black torrent. The night ends in a tragedy that will reverberate through their lives. This poignant novel follows the family's fortunes from the austerity of the post-war years to Churchill's funeral, from Greenham Common to the onset of Thatcherism and beyond, eloquently capturing the very essence of a transforming England in the decades after the war. It is a triumph of understated emotion, a novel about growing up and growing old, about love, hope and reconciliation.

Canvey Island, an island in the River Thames estuary off the coast of Essex, has a unique history. Its location has seen it welcome diverse people through the ages: from those who first came to harvest the seawater salt, to the Romans and traders who found it an entry point into the British Isles, to shepherds, cheese makers, and many others. Customer reviews: "Robert has done a wonderful job including covering areas not found in other publications on Canvey Island's history. A 'can't put down' book!" 9 June 2007, Dave Bullock, Prittlewell, Essex "This is an excellent book depicting Canvey's past, well written and informative, a must for any local or historian." 27 March 2009, R Shinn, Essex "This book outlines the true history of Canvey. I found it to be a fascinating journey through many hundreds of years. It has been thoroughly researched by the author. Many pictures I have never seen before, together with a little bit of the author's humour. It is a definite must for both Canveyites and expats alike." Councillor Joan Liddiard, Canvey Island, Essex

Over the last three decades the process industries have grown very rapidly, with corresponding increases in the quantities of hazardous materials in process, storage or transport. Plants have become larger and are often situated in or close to densely populated areas. Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough, Bhopal, Chernobyl, Three Mile Island, the Phillips 66 incident, and Piper Alpha to name but a few. The field of Loss Prevention is, and continues to, be of supreme importance to countless companies, municipalities and governments around the world, because of the trend for processing plants to become larger and often be situated in or close to densely populated areas, thus increasing the hazard of loss of life or property. This book is a detailed guidebook to defending against these, and many other, hazards. It could without exaggeration be referred to as the "bible" for the process industries. This is THE standard reference work for chemical and process engineering safety professionals. For years, it has been the most complete collection of information on the theory, practice, design elements, equipment, regulations and laws covering the field of process safety. An entire library of alternative books (and cross-referencing systems) would be needed to replace or improve upon it, but everything of importance to safety professionals, engineers and managers can be found in this all-encompassing reference instead. Frank Lees' world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field. Sam Mannan is professor of chemical engineering at Texas A&M University, and heads the Mary Kay O'Connor Process Safety Center at Texas A&M. He received his MS and Ph.D. in chemical engineering from the University of Oklahoma, and joined the chemical engineering department at Texas A&M University as a professor in 1997. He has over 20 years of experience as an engineer, working both in industry and academia New detail is added to chapters on fire safety, engineering, explosion hazards, analysis and suppression, and new appendices feature more recent disasters. The many thousands of references have been updated along with standards and codes of practice issued by authorities in the US, UK/Europe and internationally. In addition to all this, more regulatory relevance and case studies have been included in this edition. Written in a clear and concise style, Loss Prevention in the Process Industries covers traditional areas of personal safety as well as the more technological aspects and thus provides balanced and in-depth coverage of the whole field of safety and loss prevention. - A must-have standard reference for chemical and process engineering safety professionals - The most complete collection of information on the theory, practice, design elements, equipment and laws that pertain to process safety - Only single work to provide everything; principles, practice, codes, standards, data and references needed by those practicing in the field

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

It began with an outrageous press trip to New York to launch unknown rock band Brinsley Schwarz, which went disastrously wrong, and it went on to launch the careers of Ian Dury, Elvis Costello and Joe Strummer. The pub rock scene of the early 1970s was one of the most eventful and important in British music history.

For five generations Canvey Island has provided homes for many a Londoner and you can read today how the King gave rights to the families and how people had to carry their own water from a pump as in the old Dutch age. Many roads to this day still have Du
