The works of the renowned Dr. Shiyali Ramamrita Ranganathan â?? considered the father of library science in India â?? cover certain facets of library and information science. These library science classics â?? reprinted by Ess Ess Publications â?? make Dr. S.R. Ranganathan's work available to the current

generation of librarians.

A book of cataloging exercises for practicing the placing of Dewey Decimal numbers in library materials. In librarian's office.

Like earlier editions, this thoroughly updated sixth edition of the classic textbook provides readers with a basic understanding of the Library of Congress Classification system and its applications. • Serves primarily as an introductory textbook for core LIS courses in cataloging and classification and in organization of information but also as a reference work for practicing librarians • Includes an appendix containing models for sub-arrangements within disciplines

This companion is a manual which aims to expound with ample illustrations every big and small rule of the CC-6 (1963) It is a one-stop-place or a single window to learn all about the applications of the CC. It delves deep into the rules, so is likely to be helpful to the advanced students. Yet, no background knowledge has been assumed on the part of readers: an attempt has been made to make it self-sufficient. Therefore, it is equally helpful for the beginners. Use of technical terms has been kept to the minimum which otherwise have been lucidly explained with illustrations. Illustrations are a major feature of the book. The main purpose of the book is to help the Colon Classification students to fully learn the practice of the CC. It is a student-oriented book. To be thorough, deep, well-illustrated and lucid has been the objective and *raison d'être* of writing the book. Continued teaching of the Colon Classification, sixth edition (CC-6, 1963) in library schools prompts us to keep this book in print by bringing out another edition. Over the last three decades there has been an unprecedented and unchecked expansion of library education in India, especially in distance education sector. This situation calls for a further simplification of the book without compromising on its standards. Accordingly, the text has been simplified and made more explicit here and there. Some new class numbers for current subjects have been added. The endeavour is to keep the book relevant and current, despite the chronic handicaps of the geriatric CC-6 system; emphasis is still to make it a self-sufficient workbook for the beginners as well as the advanced.

?This study approaches the difficult problem of providing Internet users with a completely transparent view on electronic markets from a product information accessibility point of view. Robert Neumann analyzes economic, ecological, and societal gains of openly accessible product information in the form of theoretical models. Though many aspects of very different research disciplines have to be investigated to gain a holistic view on the Internet of Products, this thesis reduces the range of involved research topics to product information discoverability related questions.

This edition of ICD-O, the standard tool for coding diagnoses of neoplasms in tumour and cancer registrars and in pathology laboratories, has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-O is a dual classification with coding systems for both topography and morphology. The book has five main sections. The first provides general instructions for using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code.

Following on from the first edition of this book, the second edition fills the gap between more complex theoretical texts and those books with a purely practical approach. The book looks at major library classification schemes in use in Europe, UK and the USA, and includes practical exercises to demonstrate their application. Importantly, classifying electronic resources is also discussed. Classification in Theory and Practice aims to demystify a very complex subject, and to provide a sound theoretical underpinning, together with practical advice and development of practical skills. Chapters concentrate purely on classification rather than cataloguing and indexing, ensuring a more in-depth coverage of the topic. covers the latest Dewey Decimal Classification, 23rd edition provides practical advice on which schemes will be most suitable for different types of library collection covers classification of digital resources explores recent developments in digital resources and tagging
