Commingled Human Remains: Methods in Recovery, Analysis, and Identification brings together tools from diverse sources within the forensic science community to offer a set of comprehensive approaches to resolving issues associated with commingled remains. This edition focuses on forensic situations, although some examples from prehistoric contexts are also addressed.

---

Commingled Human Remains: Methods in Recovery, Analysis ...

The use of analytical methods to assess the chemical constituents can help to identify if the “ ash ” is consistent with human remains or another material. These chemical analyses can be employed should the examiner suspect that foreign material has been presented with, or in lieu of, human cremains.

---

Human Cremation: Commingling and Questioned Identity ...

Three different methods to calculate the MNE from commingled remains were compared. The results indicate different outcomes for the three methods used. The highest disparity was between the traditional and the landmark methods. The zonation and the landmark methods have similar results.

---

Evaluating three methods to estimate the number of ...

Commingled and Disarticulated Human Remains: Working Toward Improved Theory, Method, and Data brings together research that provides innovative methodologies for the analysis of commingled human remains. It has temporal and spatial breadth, with case studies coming from pre-state to historic periods, as well as from both the New and Old World.

---

Commingled and Disarticulated Human Remains: Working ...

The Commingled Remains and Analytics (CoRA) web application, database and APIs are a global community resource for inventorying assemblages of commingled human remains, while providing a framework of analytical methods and tools to assist in the segregation and subsequent identification of missing persons. Documentation for the CoRA - Commingled Remains Analytics application can be found at CoRA Online Help.

---

CoRA - Commingled Remains Analytics Welcome

The Commingled Remains Analytics (CoRA) is a web application that can be used for inventorying commingled human remains assemblages and includes features such as a zone module to assist in MNI calculations. It was developed specifically to address challenges associated with ongoing commingled projects at the DPAA.
