Computer Architecture Computer Organization: 1. Architecture describes what the computer does. Organization describes how it does it. 2. Computer Architecture deals with functional behavior of computer system. Computer Organization deals with structural relationship. 3. In above figure, its clear that it deals with high-level design issue.

Differences between Computer Architecture and Computer -

Whereas Organization expresses the realization of architecture. While designing a computer system architecture is considered first. An organization is done on the basis of architecture. Computer Architecture deals with high-level design issues. Computer Organization deals with low-level design issues. Architecture involves Logic (Instruction sets, Addressing modes, Data types, Cache optimization) Organization involves Physical Components (Circuit design, Adders, Signals, Peripherals)

There are two major approaches to processor architecture: Complex Instruction Set Computer (CISC, pronounced " Sisk ") processors and Reduced Instruction Set Computer (RISC) processors. Classic CISC processors are the Intel x86, Motorola 68xxx, and National Semiconductor 32xxx processors, and, to a lesser degree, the Intel Pentium. Common RISC architectures are the Freescale/IBM PowerPC, the MIPS architecture, Sun ' s SPARC, the ARM, the Atmel AVR, and the Microchip PIC.
