To take advantage of SAP HANA for application development, SAP introduced a new data modeling infrastructure known as core data services. With CDS, data models are defined and consumed on the database rather than on the application server. CDS also offers capabilities beyond the traditional data modeling tools, including support for conceptual modeling and relationship definitions, built-in functions, and extensions

Core Data Services [CDS] in SAP S/4 HANA | SAP Blogs

“ Core Data Services to build design-time data-persistence models ” It is an infrastructure that can be used by database developers to create the underlying (persistent) data model which the application services expose to UI clients.
