A comprehensive look at the enormous growth and evolution of distressed debt, corporate bankruptcy, and credit risk default This Third Edition of the most authoritative finance book on the topic updates and expands its discussion of corporate distress and bankruptcy, as well as the related markets dealing with high-yield and distressed debt, and offers state-of-the-art analysis and research on the costs of bankruptcy, credit default prediction, the post-emergence period performance of bankrupt firms, and more. Edward I. Altman (New York, NY) is the Max L. Heine Professor of Finance at the Stern School of Business, New York University. He received his MBA and PhD in finance from the University of California, Los Angeles. Edith Hotchkiss (Chester Hill, MA) is Associate Professor of Finance at Boston College. She received her PhD from the Stern School of Business and her BA from Dartmouth College.

Philipp Jostarndt studies distress-induced changes in ownership and control, success factors in distressed equity infusions, and firms' choice between in- and out-of-court debt restructurings. In addition, he analyzes the determinants of survival, acquisition, and bankruptcy as alternative paths to exit financial distress. He includes both the firm perspective as well as the market valuations of the undertaken restructurings and, where applicable, relates the findings to the microstructure of Germany's revised bankruptcy legislation.

Corporate Financial Distress and Bankruptcy has moved into a public domain due to the recent global financial crisis that witnessed failures of many corporations that were rescued by the government. This survey will highlight the resolution mechanisms for corporate financial distress and bankruptcy not only in the private domain but also in the public domain and will use corporate finance paradigms to interpret some of these far-reaching developments in financial distress of systemic nature.

A comprehensive look at the enormous growth and evolution of distressed debt markets, corporate bankruptcy, and credit risk models This Fourth Edition of the most authoritative finance book on the topic updates and expands its discussion of financial distress and bankruptcy, as well as the related topics dealing with leveraged finance, high-yield, and distressed debt markets. It offers state-of-the-art analysis and research on U.S. and international restructurings, applications of distress prediction models in financial and managerial markets, bankruptcy costs, restructuring outcomes, and more.

This topical and easily understood handbook explains how bankruptcy can affect a corporation and its capital structure and how investors can profit from the corporate bankruptcy process.

This book, divided into three main parts, will offer a complete overview of the concept of corporate financial distress, emphasizing the different typologies of corporate paths included in this broad concept. It will reorganize and update academic literature about the evaluation of corporate financial distress from the first studies about failure prediction to the most recent contributions. It will also provide evidence about the evolution of going concern standards in both international and U.S. contexts. Moreover, an in-depth analysis of this broad concept will permit the identification of a set of research questions to be investigated from both theoretical and empirical points of view, and will be of interest to academic researchers and doctoral students of accounting, auditing and finance, professionals, and standard setters.
