Detection of COVID-19: A review of the current literature ...

In this review, we discuss the current state of gene editing technologies and their use as treatments for human disease. We place special emphasis on CRISPR (clustered regularly interspaced short palindromic repeat DNA sequences)-based technologies, as they are quickly transforming the state of life science research around the world and progressing into clinical trials.

Gene editing and CRISPR in the clinic: current and future ...

Current and future perspectives on the management of polypharmacy. ... In the future, linkage of primary care records with hospital admission records can further improve this process by allowing the identification of individuals who have had an acute hospital admission from an adverse drug reaction or a drug interaction.
