Over 1,600 total pages Application and Use: Commanders, security and antiterrorism personnel, planners, and other members of project planning teams will use this to establish project specific design criteria for DoD facilities, estimate the costs for implementing those criteria, and evaluating both the design criteria and the options for implementing it. The design criteria and costs will be incorporated into project programming documents.

The need for a single reference book of recommendations and guidance for tunnel lining design has long been recognised. In partnership with the Institution of Civil Engineers Research an Development fund, The British Tunnelling Society (BTS) considered that the valuable knowledge and experience of its members on tunnel lining design should be made available to the wider international underground construction industry. Tunnel lining design guide is primarily intended to provide those determining specifications of tunnel linings with a guide to the recommended rules and practices to apply in their design. In addition, it provides practitioners who procure, operate, or maintain tunnels, along with those seeking to acquire data for use in their design, with details of the factors that influence correct design, such as end use, construction practice and environmental influences.

The Global Street Design Guide is a timely resource that sets a global baseline for designing streets and public spaces and redefines the role of streets in a rapidly urbanizing world. The guide will broaden how to measure the success of urban streets to include: access, safety, mobility for all users, environmental quality, economic benefit, public health, and overall quality of life.

The first-ever worldwide standards for designing city streets and prioritizing safety, pedestrians, transit, and sustainable mobility are presented in the guide. Participating experts from global cities have helped to develop the principles that organize the guide. The Global Street Design Guide builds off the successful tools and tactics defined in NACTO's Urban Street Design Guide and Urban Bikeway Design Guide while addressing a variety of street typologies and design elements found in various contexts around the world.

The Wheelchair Housing Design Guide explains how to design and detail a home that is fully manageable by wheelchair users and maximises their independence. This fully-updated, activity-based guide discusses design considerations, requirements and recommendations for various activities carried out within the home; provides design solutions and good practice examples of how to comply with the building accessibility regulations and Building Regulations Part M; reflects and promotes the values and principles of existing strategies for social inclusion, and promotes the long-term cost benefits of designing to wheelchair accessibility standards.

This design guide offers a thorough discussion of the theoretical as well as the practical aspects of a cogeneration system design. A brief discussion of the legal and regulatory aspects is followed by a detailed discussion of the prime movers (reciprocating engines, combustion turbines and steam turbines), heat recovery and electrical recovery equipment. There are two case studies (a hospital and an industrial application) to help illustrate the entire design process. ASHRAE Research Project 737.
