Design for How People Think (Don Norman) - YouTube

Design thinking refers to the cognitive, strategic and practical processes by which design concepts are developed. Many of the key concepts and aspects of design thinking have been identified through studies, across different design domains, of design cognition and design activity in both laboratory and natural contexts. Design thinking is also associated with prescriptions for the innovation of products and services within business and social contexts. Some of these prescriptions have been crit

Design thinking - Wikipedia

John Whalen's book, Design for How People Think, is a good summary of a research process when preparing a product or service. While many of the examples make reference to internet connected technologies, the book is also relevant to ideas for developing technologies such as voice and virtual reality applications.

Design Thinking is a design methodology that provides a solution-based approach to solving problems. It's extremely useful in tackling complex problems that are ill-defined or unknown, by understanding the human needs involved, by re-framing the problem in human-centric ways, by creating many ideas in brainstorming sessions, and by adopting a hands-on approach in prototyping and testing.

Step 1: Consider your priorities and practicalities For most research problems, there is not just one possible research design, but a range of possibilities to choose from. The choices you make depend on your priorities in the research, and often involve some tradeoffs - a research design that is strong in one area might be weaker in another.
