Showcasing evidence-based models for schoolwide prevention of reading and behavior problems, this book is highly informative, practical, and grounded in research. Chapters first identify the core features of effective three-tier prevention models and explain their role within a response-to-intervention framework. In-depth case studies then illustrate the experience of implementing distinct models (targeting reading problems, behavior problems, or both) in actual schools across the country. The cases yield vital insights into the process of choosing the right prevention model for a particular school; coordinating faculty teams and building their skills; and conducting universal screening, progress monitoring, and data-based decision making to improve student outcomes.

"This prevention-oriented assessment for the growth and development of literacy skills will help you easily identify students in need of intervention and accurately evaluate the effectiveness of intervention strategies. DIBELS is designed for ongoing use to measure foundational skills and progress in reading; predict later reading success and performance on high-stakes tests; and provide an instructional goal that will prevent reading failure and promote reading success."--Publisher's web site.

Eleven core standards are presented and explained, and a helpful glossary makes this document suitable not only for educators but for parents, policymakers, school board members, and other stakeholders. Case studies of large-scale national tests and smaller scale classroom assessments (particularly in the context of RTI, or Response to Intervention) are used to highlight how assessments in use today do or do not meet the standards.
