When the DIN EN ISO 8015 was released in 2011, it was not a big topic in the PCB industry. The PCB drawings were simple and clearly arranged. The tolerances, such as $\pm 0.1\text{mm}$, could be understood by everyone around the world and the result of measurement told us exactly where the deviation from the reference value was.

General tolerances for form and position should be used while the tolerance principle according to ISO 8015 is valid and while this is mentioned in the drawing. This tolerance principles says that no opposite relation between measure, form and position tolerance exists (principle of superposition).
