This contributed volume brings together a series of authoritative chapters that critically examine major areas of contemporary behavioral research on opiates and the endogenous opioid systems. Discusses the three opioid peptide families, ligand-receptor selectivity, classic effects of opiates and related substances, and endogenous opioids in the regulation of food intake and the controls of drinking and water balance. Behavioral processes with which opioid mechanisms have been associated are also examined including social attachment and social interaction, sexual behavior, exploration and activity, and learning and memory.

Dedicated to Professor Albert Herz, a leading investigator in opioid research, this book provides comprehensive information on the biology of exogenous and endogenous opioids. Contributions by experts in the field discuss recent advances and provide systematic, up-to-date reviews of the physiology and pharmacology of opioids, as well as on the cellular and molecular mechanisms underlying opioid actions. In recognition of the diverse methodologies now available to researchers, each chapter details the approaches used to address a specific issue and provides an in-depth analysis of the data obtained by these various experimental approaches. The clinical relevance of recent findings, as well as future directions, in opioid

research are also discussed. This volume thus represents a timely and invaluable sourcebook for researchers, clinicians, and students interested in opioids and peptidergic systems.

This book is an introductory text in neuroendocrinology for undergraduate students.

This two-volume book provides the first comprehensive survey of opioid research, a field which has accumulated a tremendous amount of literature since the identification of opioid receptors and their endogenous ligands. In more than 60 chapters experts present state-of-the-art reviews of this fascinating

field, the topics ranging from molecular biology to clinical applications. Part I covers the multiplicity of opioid receptors, the chemistry of opiates and opioid peptides as well as the neurophysiology of opioids. Part II reviews a broad spectrum of physiological and behavioral functions and pharmacological actions of opioids, together with their neuroendocrinology, opioid tolerance and dependence, concluding with pathophysiological aspects and clinical use.

presented at the Scientific Meeting of the Australian Behavioral Immunology Group (ABIG) held in November, 1990, at the University of Newcastle, Australia. The ABIG was established in response to the need to provide a forum for the presentation of data and exchange of ideas regarding the concept of brain, behavior, and immunity. The papers presented in this volume represent the state of the art in a number of areas where these interactions have been studied. Information is presented regarding the biochemistry, neurophysiology, and endocrinology of nervous system/immune system interactions; the role of behavioral conditioning in immunity; the effects of sleep and biological rhythms on immune function; the role of

Researchers in immunology, psychology, neurology; physicians; and lay people with an interest in the interaction between lifestyle and health will find a wealth of information in this stimulating volume.

a sweeping view of this elusive and controversial aspect of religious life and culture, Asceticism looks at the ascetic impulse from a unique vantage point. Cross-cultural, cross-religious, and multidisciplinary in nature, these essays provide a broad historical and comparative perspective on asceticism--a subject rarely studied outside the context of individual religious traditions. The work represents the input of more than forty preeminent scholars in a wide range of fields and disciplines, and analyzes asceticism from antiquity to the present in European, Near Eastern, African, Asian, and North American settings. Asceticism is organized around four major themes that cut across religious traditions: origins and meanings of asceticism, which

explores the motivations and impulses behind ascetic behaviors; hermeneutics of asceticism, which looks at texts and rhetorics and their presuppositions; aesthetics of asceticism, which documents responses evoked by ascetic impulses and practices, as well as the arts of ascetic practices themselves; and politics of asceticism, which analyzes the power dynamics of asceticism, especially as regards gender, cultural, and ethnic differences. Critical responses to the major papers ensure the focus upon the themes and unify the discussion. Two general addresses on broad philosophical and historical-interpretive issues suggest the importance of the subject of asceticism for wide-ranging but serious cultural-critical discussions. An

Appendix, *Ascetica Miscellanea*, includes six short papers on provocative topics not related to the four major themes, and a panel discussion on the practices and meanings of asceticism in contemporary religious life and culture. A selected bibliography and an index are also included. The only comprehensive reference work on asceticism with a multicultural, multireligious, and multidisciplinary perspective, *Asceticism* offers a model not only for an understanding of a most important dimension of religious life, but also for future interdisciplinary study in general.
