Volume 1: Primary Processing is divided into seven parts: Poultry: biology to pre-mortem status—includes such topics as classification and biology, competitive exclusion, transportation to the slaughterhouse, and more Slaughtering and cutting—includes the slaughterhouse building and required facilities, equipment, and operations; carcass evaluation and cutting; kosher and halal slaughter; and more Preservation: refrigeration and freezing—includes the biology and physicochemistry of poultry meat in rigor mortis under ambient temperature, as well as changes that occur during freezing and thawing; engineering principles; equipment and processes; quality; refrigeration and freezing for various facilities; and more Preservation: heating, drying, chemicals, and irradiation Composition, chemistry, and sensory attributes—includes quality characteristics, microbiology, nutritional components, chemical composition, and texture of raw poultry meat Eggs—includes egg attributes, science, and technology Sanitation and Safety—includes PSE, poultry-related foodborne diseases, OSHA requirements, HACCP and its application, and more

Exercise testing is widely used all over the world to assess functional capacity in athletes, healthy subjects and patients. According to recent surveys, the interest in ergometry is still growing in almost all fields of medicine, especially in private practice. Furthermore, there has been an exponential growth in the number of publications on exercise testing in the last years. Several consensus and task force conferences have dealt with exercise testing and published recommendations on standardization and guidelines in ergometry. These factors have, in combination, initiated an upsurge in research and clinical use of exercise testing. At the 6th International Seminar on Ergometry the latest findings and advances in ergometry were discussed. Reviews and results of the congress covering a wide range of features in exercise testing are presented in this book. The editors hope that this book will make a substantial contribution to our knowledge regarding exercise testing and will help physicians to appropriately evaluate exercise testing in healthy and diseased subjects. The editors are indebted to Miss I. Baumgartner and Mr. W. Reith for their effort in typing and preparing the manuscripts. This new edition of the popular and market-leading Diabetes in Old Age features up-to-date and comprehensive information about the key aspects of managing older people with diabetes, predominantly type 2 diabetes. With a strong evidence-based focus throughout, the entire range of issues surrounding diabetes and its many complications are covered, each with a clear focus on how they relate directly to the older patient. Varying approaches to optimizing diabetes care in the community, primary care and secondary care health care arenas are presented, and the importance of comprehensive functional assessment is emphasized. Coverage of areas unique to an ageing population of older people with diabetes such as falls management, frailty and sarcopenia, and cognitive dysfunction form a key cornerstone of the book. In every chapter, best practice points and key learning outcomes are provided, as well as published evidence bases for each major conclusion. Diabetes in Old Age, 4th edition is essential reading for diabetologists and endocrinologists, diabetes specialist nurses, primary care physicians, general physicians and geriatricians, podiatrists and dieticians with an interest in diabetes, as well as all health professionals engaged in the delivery of diabetes care to older people.

Presents state of the practice information about the various actions transit agencies (and other employers) have taken to help ensure the availability of quality employees in an increasingly competitive employment environment. It focuses on the practices and policies transit agencies have put in place to help minimize absenteeism at their agencies, from which other agencies may find useful applications.

This book is the most comprehensive reference ever written for individuals interested in law enforcement selection. The chapters contain meta-analyses (statistical reviews of the literature) investigating the validity of methods used to predict police performance. These methods include education requirements, cognitive ability, background variables (e.g., military experience, arrest record, discipline problems at work), personality inventories, interest inventories, physical agility tests, assessment centers, and interviews. The first chapter in the book is a short primer on meta-analysis that informs the reader about the purpose of meta-analysis and how to interpret the meta-analysis tables contained in the book. Chapter 2 describes the methods used to conduct the meta-analyses for this project. Chapters 3-11 list the meta-analysis results for the various predictors of police performance. Chapter 12 describes a meta-analysis of the relationships among criteria (e.g., performance ratings, discipline problems, commendations), Chapter 13 describes a meta-analysis of the relationships among selection methods, and Chapter 14 describes a meta-analysis of the relationship between the various criteria and sex, race, age, and tenure. Chapter 15 summarizes the previous chapters and identifies future research needs.
