Esthetic Soft Tissue Management of Teeth and Implants ...

The esthetic difficulties involved in implant dentistry are managing the soft tissue, and mimicking the natural appearance of the patient's teeth and gingiva. Indeed, achieving the ultimate esthetic results in the anterior zone with implant restoration should be similar to achieving esthetic results with conventional restorative dentistry.

naturally appearing implant supported restoration.

This book offers a step-by-step guide to success in periodontics and implant dentistry, helping clinicians to create a natural and esthetically pleasing smile for their patients. Starting with a general discussion of facial esthetics and analyzing the dento-gingival constituents of the smile, the book goes on to consider the impact of these on people's quality of life. Subsequent chapters focus on specific esthetic treatments such as crown lengthening procedures, gingival recession coverage with connective tissue grafts or periodontal regenerative material and soft tissue management for natural teeth and

As an evolution in implant therapy has occurred, there has been widespread recognition of the need for a restoration-driven approach that considers the placement of implants in bone and soft tissue from a 3D perspective. Here, the authors have developed the four-dimensional (4D) approach to implant therapy.

This book concisely elucidates the science underlying implant treatment in the aesthetic zone in partially edentulous patients and clearly describes the techniques and protocols used by world-leading experts in the field. The book is divided into four parts that address treatment planning; site preparation (hard and soft tissue augmentation);

Immediate implant placement and provisional restoration; and the design, fabrication, and delivery of the definitive implant prosthesis. Complex cases of this nature present a significant challenge to even the most well informed and experienced of doctors. Implants in the Aesthetic Zone has been specifically crafted to meet all the needs of the clinician involved in their management, providing a reliable road map for interdisciplinary implant treatment in clinical practice. The authors have been carefully selected from a wide range of fields for their expertise in particular areas of implant science or treatment.

This book presents a new concept for optimizing implant positioning to achieve successful esthetic results. Dr

Patrick Palacci's papilla regeneration technique for peri-implant soft tissue management is described, and current basic knowledge regarding the biology, pathology, and biomechanics of peri-implant soft tissues is also highlighted. These new techniques will help clinicians create better esthetic and functional results and increase patient satisfaction. This book will benefit all practitioners involved in providing dental implant treatment.

This text presents guidelines for optimizing the functional and esthetic result of the third dentition, including successful integration of the implant with bone to achieve long-term maintenance of implant stability; bone augmentation procedures; and an evaluation of prosthetic components.
