Evidence Of

Evolution for human evolution is the existence of vestigial structures, body parts that seemingly have no purpose. Perhaps they once did, but somewhere along the way they lost their functions and are now basically useless.

~~4 Vestigial Structures Found in Humans~~

*Page 25/34*

# Read PDF Evidence Of

Vestigial organs are a subset of the line of evidence known as homology. This refers to the similarity in organs or structures among different species that implies a common ancestor. For example, a bat's wing and a human hand have homologous bone structure, whereas a
