Notebooking journal for elementary study of human anatomy, written from a Christian perspective.

This comprehensive manual is appropriate for a one-semester anatomy-only laboratory course. The unique interactive approach of these exercises helps students develop a deeper understanding of the material as they prepare to embark on allied health careers. This manual complements the lecture material. Features: • Objectives set learning goals to prepare students for what they are expected to know after completing the lab, and also aid in the review of material. • Pre-lab Exercises encourage students to actively prepare for the lab by defining key terms, labeling and coloring illustrations to learn anatomical structures, and reviewing vital material from previous units, saving instructors from having to spend excessive time reviewing material from the lecture. • Hints & Tips appear throughout the book to help students navigate some of the more difficult topics in anatomy. • Model Inventories provide easily referenced lists of anatomical structures that students are responsible for identifying. These lists help students catalog the specimens they see in the lab. • A Pronunciation Guide has been added to help students learn the correct pronunciation of key terms. • Illustrations and photographs were specifically designed for use in the laboratory setting. The clear photographs and photomicrographs, coupled with carefully drawn illustrations, provide a detailed view of anatomical structures. • Focused Activities describe the guiding

philosophy of this lab manual. Students learn best when they are actively involved in the laboratory. In this manual, students are asked to be active by describing, labeling, writing, coloring, and drawing. Tracing Exercises ask students to write step-by-step, turn-by-turn directions to follow substances (blood cells, food molecules, waste by-products, electrical events) through the human body, or trace the substances path on a map of the body. These exercises allow students to see the big picture of how the body systems interact and to understand the relationship between structure and function. Check Your Understanding questions ask students to use the information they have learned to answer critical thinking questions, which are frequently related to clinical scenarios. Check Your Recall quizzes in each unit include labeling, fill-in-the-blank, multiple choice, and matching questions.

A Photographic Atlas for Anatomy & Physiology is a new visual lab study tool that helps students learn and identify key anatomical structures. Featuring photos from Practice Anatomy Lab (tm) 3.0 and other sources, the Atlas includes over 250 cadaver dissection photos, histology photomicrographs, and cat dissection photos plus over 50 photos of anatomical models from leading manufacturers such as 3B Scientific®, SOMSO®, and Denoyer-Geppert Science Company. The Atlas is composed of 13 chapters, organized by body system, and includes a final chapter with cat dissection photos. In each chapter, students will first explore gross anatomy, as seen on cadavers and anatomical models, and then conclude with relevant histological images.
