range of developing countries. The first book is based on the experiences of Malaysia and Sri Lanka during the past five to six decades. The second book discusses the more recent experiences of Bolivia, China (Yunnan), Egypt, Honduras, Indonesia, Jamaica, and Zimbabwe. These nine countries have made important strides in improving maternal health, and these two books outline what worked and what did not."--BOOK JACKET.

Feeding during the first two years of life is very important for the nutrition and growth of an infant. It has a great effect on early morbidity and mortality and long-term effects on health.

Breastfeeding has many benefits for both the infant and mother, whereas formula feeding, although associated with disadvantages and problems, can be life-saving for infants who need it. This book

Download Ebook Factors Affecting Utilization Of Postnatal Care Service In

examines many aspects of infant feeding and nutrition with chapters covering such topics as the impact of the first 1000 days of nutrition on child health and development, breastfeeding, factors behind the decision to breastfeed or formula feed, and the relationship between breastfeeding and gut microbiota, among others.

World Health Statistics 2013 contains WHO's annual compilation of health-related data for its 194 Member States and includes a summary of the progress made towards achieving the health-related Millennium Development Goals (MDGs) and associated targets. This year it also includes highlight summaries on the topics of reducing the gaps between the world's most-advantaged and least-advantaged countries and on current trends in official development assistance (ODA) for health. As in previous years World Health

Statistics 2013 has been compiled using publications and databases produced and maintained.

This book provides a state-of-the-art, comprehensive review of the many factors that affect women's health, ranging from low socioeconomic status and the impact of the debt crisis to more direct medical determinants, such as poor nutrition, hemorrhage, eclampsia, and infection. At stake are the unnecessary and preventable deaths of women and girls around the globe. The contributors assess the reduced quality of life for women and the often unacknowledged contributions of women and girls as the backbone of production in both developing and developed countries. Synthesizing perspectives of policymakers and practitioners, researchers and scholars, *The Health of Women* urges

major new initiatives to understand and improve women's health, taking into account biological elements such as the life cycle of women as well as cultural constraints and socioeconomic realities.

Within the continuum of reproductive health care, antenatal care provides a platform for important health-care functions, including health promotion, screening and diagnosis, and disease prevention. It has been established that, by implementing timely and appropriate evidence-based practices, antenatal care can save lives. Endorsed by the United Nations Secretary-General, this is a comprehensive WHO guideline on routine antenatal care for pregnant women and adolescent girls. It aims to complement existing WHO guidelines on the management of specific pregnancy-related complications. The guidance captures the complex nature of the antenatal care issues

population sector as well as students and scholars of public health.

Having a child remains one of the biggest health risks for women worldwide. Fifteen hundred women die every day while giving birth. That's a half a million mothers every year. UNICEF's flagship publication, *The State of the World's Children 2009*, addresses maternal mortality, one of the most intractable problems for development work. The difference in pregnancy risk between women in developing countries and their peers in the industrialised world is often termed the greatest health divide in the world. A woman in Niger has a one in seven chance of dying during the course of her lifetime from complications during pregnancy or delivery. That's in stark contrast to the risk for mothers in America, where it's one in 4,800 or in Ireland, where it's just one in 48,000.

Download Ebook Factors Affecting Utilization Of Postnatal Care Service In

Addressing that gap is a multidisciplinary challenge, requiring an emphasis on education, human resources, community involvement and social equality. At a minimum, women must be guaranteed antenatal care, skilled birth attendants and emergency obstetrics, and postpartum care. These essential interventions will only be guaranteed within the context of improved education and the abolition of discrimination.
