The SLD seal support system from Flowserve dispenses lubrication to the atmospheric side of mechanical seals. It is ideal for seals subjected to periods of dry running or cavitation when product liquid (pumpage) does not provide adequate film between seal faces. The SLD is proven to greatly extend flushless seal life in harsh slurry conditions.

Worcester Flowserve V-Flow control valves use Worcester ' s revolutionary metal-seat technology, combined with a process ball-valve, to deliver exceptional modulating-control that also minimise the typical problems associated with traditional control valves. Typical V-Flow control valve configurations include flanged ball-valves machined to ANSI/DIN standards in reduced/full bore and three-piece valves for cryogenic, high pressure, steam, diverter or sampling.
