Double exponential smoothing. This method is also called as Holt's trend corrected or second-order exponential smoothing. This method is used for forecasting the time series when the data has a linear trend and no seasonal pattern. The primary idea behind double exponential smoothing is to introduce a term to take into account the possibility of a series showing some form of trend.

Exponential Smoothing- Definition, Formula, Methods and ...

Exponential smoothing methods have been around since the 1950s, and are still the most popular forecasting methods used in business and industry. However, a modelling framework incorporating stochastic models, likelihood calculation, prediction intervals and procedures for model selection, was not developed until relatively recently.

Forecasting with Exponential Smoothing: the State Space ...

c) For exponential smoothing with a smoothing constant of 0.2, I first had to assume that the initial forecast for year 1 would naïvely be 341. With that in mind, I used this formula for each year until I got to determining the forecast for 2020: $F_{2020} = F_{2019} + 0.2 * (A_{2019} - F_{2019}) = 315.7055 + 0.2 * (285 - 315.7005) = 309.5644$ I can ...

The simplest of the exponentially smoothing methods is naturally called simple exponential smoothing (SES) 13. This method is suitable for forecasting data with no clear trend or seasonal pattern. For example, the data in Figure 7.1 do not display any clear trending behaviour or any seasonality.

It basically means to get your forecast (F) you need to multiply your smoothing constant (α the weighted score we talked about previously) by the actual sales from the last period (A). You then add those $1 - \alpha$ – the weighted score and times it by the forecasted sales from the previous period (B)

Triple Exponential Smoothing (with Implementation in Excel) This is also popularly known as Holt Winter's algorithm. The triple exponential smoothing algorithm, as you would have already guessed, considers three components – Level, Trend, and Seasonality. Note that the seasonal component can be in the additive or multiplicative form.
