Charge comes in 2 types, positive and negative and is measured in Coulombs (C). If you have a charge on its own it emits a field in all directions. The field from a charge is represented by E as in Electricity. If you put another charge in the field it experiences a force. Like charges repel and unlike charges attract.

Electromagnetic Field Theory -
Physics Department
Electrodynamics is creating a
magnetic field from an electric
current. When electricity passed
through a wire, a magnetic field is
created around the wire. Looping
the wire increases the magnetic
field. Adding an iron core greatly
increases the effect and creates
an electromagnet. You can also
create an electromagnet without
the iron core.
