Fluid mechanics is a
branch of mechanics that

studies fluids and the forces on them. Fluid mechanics examines fluids in two subsystems: static and dynamic.

Fluids, and especially air and water, have a major role in the life of creatures and ~65% of our body is composed of water.

And in solid, the stress is directly proportional to the strain, whereas, in fluid the stress is directly proportional to the strain rate. Thus, a solid differs from a fluid. A liquid is a substance which has its own definite volume, whereas gas is the one which occupies the volume of its container and doesn't have its
