The Global Competitiveness Report 2003-2004 is the 24th of the World Economic Forum's annual rankings of the world's leading economies. Written in a non-technical language and style, this report aims to appeal to a broad audience consisting of policy makers, business leaders and academics.

The Global Investment Competitiveness Report 2019-2020 provides novel analytical insights, empirical evidence, and actionable recommendations for governments seeking to enhance investor confidence in times of uncertainty. The report's findings and policy recommendations are organized around "3 ICs" - they provide guidance to governments on how to increase investments' contributions to their country's development, enhance investor confidence, and foster their economies' investment competitiveness. The report presents results of a new survey of more than 2,400 business executives representing FDI in 10 large developing countries: Brazil, China, India, Indonesia, Malaysia, Mexico, Nigeria, Thailand, Turkey, and Vietnam. The results show that over half of surveyed foreign businesses have already been adversely affected by policy uncertainty, experiencing a decrease in employment, firm productivity, or investment. Foreign investors report that supporting political environments, stable macroeconomic conditions, and conducive regulatory regimes are their top three investment decision factors. Moreover, the report's new global database of regulatory risk shows that predictability and transparency increase investor confidence and FDI flows. The report also assesses the impact of FDI on poverty, inequality, employment, and firm performance using evidence from various countries. It shows that FDI in developing countries yields benefits to their firms and citizens-including more and better-paid jobs-but governments need to be vigilant about possible adverse consequences on income distribution. The report is organized in 5 chapters: Chapter 1 presents the results of the foreign investor survey. Chapter 2 explores the differential performance and development impact of greenfield FDI, local firms acquired by multinational corporations (i.e. brownfield FDI), and domestically-owned firms using evidence from six countries. Chapter 3 assesses the impact of FDI on poverty, inequality, employment and wages, using case study evidence from Ethiopia, Turkey and Vietnam. Chapter 4 presents a new framework to measure FDI regulatory risk that is linked to specific legal and regulatory measures. Chapter 5 focuses on factors for increasing the effectiveness of investment promotion agencies.

Since 1979 the World Economic Forum, a foundation based in Geneva, has produced annual reports on the relative competitiveness of countries (the term "country" as used in this report covers well-defined, geographically self-contained areas that are not states but for which statistical data are maintained on a separate and independent basis), tracing the extraordinary development of the world economy during the last twenty years. The Global Competitiveness Report uses a research-based Competitiveness Index in which rankings of relevant economies are given on a multitude of business and economic factors. From its inception, the Report has furnished specific competitive information on the world's key economies (59 this year), now presented with two page profiles for each economy. These profiles provide: major performance indicators; each economy's rank in competitiveness; and highlights of particular strengths and weaknesses. Each year the Report becomes an ever more refined analytical tool for exploring the exponential expansion of interconnections in our global economy.

The Global Investment Competitiveness report presents new insights and evidence on drivers of foreign direct investment (FDI) in developing countries, and FDI ' s role in development. The report ' s survey of 750 executives of multinational corporations finds that a business-friendly legal and regulatory environment is a key driver of investment decisions in developing countries, along with political stability, security, and macroeconomic conditions. The report ' s topic-specific chapters explore the potential of FDI to create new growth opportunities for local firms, assess the power of tax holidays and other fiscal incentives to attract FDI, analyze characteristics of FDI originating in developing countries, and examine the experience of foreign investors in countries affected by conflict and fragility. Three key features of this Global Investment Competitiveness report distinguish it from other publications on FDI. First, its insights are based on a combination of first-hand perspectives of investors, extensive analysis of available data and evidence, and international good practices in investment policy design and implementation. Secondly, rather than exploring broad FDI trends, the report provides detailed and unique analysis of FDI depending on its motivation, sector, geographic origin and destination, and phase of investment. Thirdly, the report offers practical and actionable recommendations to policymakers in developing countries wishing to reform their business climates for increased investment competitiveness. As such, the report is meant to complement other knowledge products of the World Bank Group focused even more explicitly on country-level data, detailed reform diagnostics, and presentation of best practices. We are confident this report will bring value and fresh perspectives to a variety of audiences. To governments and policymakers, including investment promotion professionals, the report offers direct insights into the role of government policies and actions in investors ' decision-making. To foreign investors and site location consultants, the report provides information on FDI trends and drivers across sectors and geographies. For academic audiences, the new datasets on investment incentives and FDI motivations enables opportunities for additional research and analysis. Lastly, for development assistance providers and other stakeholders, the report highlights key approaches for maximizing FDI ' s benefits for development.

This year's Global Competitiveness Report appears at a time of exceptional uncertainty. Global economic activity has slowed substantially, stock markets have shown considerable volatility, and the world's major currencies have experienced significant fluctuations. In Europe, where the final steps toward monetary are being taken, output has declined considerably below the region's production potential. In Japan, there are serious concerns about a prolonged recession, and in several countries throughout the rest of Asia, industrial production has shrunk markedly. Other emerging market economies have been subject to financial turmoil that reminds us of the severe crises of 1997 and 1998. The greatest uncertainty, however, concerns the United States, whose economy had essentially come to a standstill in the second quarter of 2001. Coping with the enormous challenges currently facing the global economy requires pursuing a prudent and proactive macroeconomic policy stance. More importantly, it requires strengthening the cross-border networks that promote private investment, entrepreneurship, and social progress around the world. In this endeavor, The Global Competitiveness Report remains an invaluable tool by identifying existing impediments to economic growth and thus helping in the design of policy measures to remove such obstacles as a precondition for advancing human well-being across the globe. This year's Report appears in the aftermath of the September 11th terrorist attacks in the United States. The unprecedented tragedy that occurred - and the events these attacks have triggered - have profoundly affected the global economic outlook. In response to this extraordinary economic shock, the 2001-2002 Report includes a separate, shorter-term analysis of the world economy in the new Introduction. Based on responses from 90 senior executives whose companies are part of the World Economic Forum, this "flash survey" assesses the magnitude of the effects of September 11 over the coming months. In addition, no fewer than 17 countries have been added to the country profile analysis, reflecting the rising integration of developing countries into the global economy. It also ensures that The Global Competitiveness Report remains the most authoritative source for policymakers, the business community, and other key stakeholders. Data CD-ROM: For the first time ever, results from the World Economic Forum/Harvard University Executive Opinion Survey are available to researchers and policymakers on CD-ROM. This includes many of the same results used in the construction of the Growth Competitiveness Index and the Current Competitiveness Index.
