- Hands are the main pathways of germ transmission during health care.
- Hand hygiene is therefore the most important measure to avoid the transmission of harmful germs and prevent health care-associated infections.
- This brochure explains how and when to practice hand hygiene.

Hand Hygiene: Why, How & When? - World Health Organization

Washing your hands properly removes dirt, viruses and bacteria to stop them spreading to other people and objects, which can spread illnesses such as food poisoning, flu or diarrhoea. It can help stop people picking up infections and spreading them to others.

How to wash your hands - NHS

Hand Hygiene is one of the most effective actions to reduce the spread of pathogens and prevent infections, including the COVID-19 virus. Conducting hand hygiene at the right time,

Bookmark File PDF Hand Hygiene

using the right technique, with either Alcohol-Based Hand Rub (ABHR) or soap, water and disposable or clean towels is critical.

HPS Website - Hand hygiene

Regular and effective hand hygiene is the single-most important thing you can do to protect yourself and others from infection. Your hands naturally have germs on them. Some live naturally on the hands, others are picked up as a result of touching objects or surfaces (e.g. tables, chairs, beds) as we go about our daily lives.

Hand hygiene | First Steps | RCN

Hand hygiene is essential for removing bacteria, viruses, and dirt, and prevents them from spreading to other people and objects. We must remember that we can pick up germs from everything we touch, so washing our hands frequently and after doing certain things is very important. You should always aim to wash your hands:

Hand Hygiene | Myths and Facts About Hand Washing

Hand hygiene includes: Applying an alcohol-based handrub to the surface of hands (including liquids, gels and foams)

What is Hand Hygiene?

Broadly, traditional solid soap bars tend to be made from a combination of fat or oil, water and an alkali substance such as lye. Liquid soap, or hand wash, is made from synthetic detergents, such as sodium lauryl ether sulfate, instead. Ideally, choose one with moisturising agents, as this will help to offset frequent hand washing.

Hand hygiene, soap and sanitiser gel: what you need to ...

Practicing hand hygiene is a simple yet effective way to prevent infections. Cleaning your hands can prevent the spread of germs, including those that are resistant to antibiotics and are becoming difficult, if not impossible, to treat. On average, healthcare providers clean their hands less than half of the times they should.

Hand Hygiene in Healthcare Settings | CDC

Hand hygiene is the primary measure in preventing HCAs and is the cornerstone of good infection prevention and control (IPC) practice (World Health Organization, 2009). Hand decontamination can be achieved using alcohol-based handrub (ABHR) or liquid soap and water.

Infection control 6: hand hygiene using soap and water ...

The WHO guidelines on hand hygiene in health care provide health-care workers (HCWs), hospital administrators and health authorities with a thorough review of evidence on hand hygiene in health care and specific recommendations to improve practices and reduce transmission of pathogenic microorganisms to patients and HCWs.

WHO | WHO guidelines on hand hygiene in health care

Hand hygiene has been shown to reduce the incidence of absenteeism in schools as good hand hygiene reduces the spread of microbes and infection.
