When will air-cooled Harleys end? - Motorbike Writer

The Evolution engine (popularly known as Evo) is an air-cooled, 45-degree, V-twin engine manufactured from 1984 by Harley-Davidson for the company's motorcycles.

Harley-Davidson Evolution engine - Wikipedia

Harley-Davidson made some waves at EICMA this week, showing off two models it teased in 2018, the Pan America adventure tourer and the Bronx streetfighter. Both are powered by a new liquid-cooled...

Harley Releases Details On Revolution Max Engine, Pan ...

Some people might assume that the term “ liquid-cooled ” refers to a full-blown, water-cooled engine, but Harley 's so-called Twin-Cooled power plants use both oil and water for thermal relief, applying coolant only to the cylinder heads (which leaves the engine block cooled by oil and air), and focuses the cooling effort towards the hottest part of the heads: the exhaust valves.

Liquid Cooled 2014 Harley-Davidsons: 6 Things to Know

(Harley Evolution engines are air-cooled, 45-degree long-strokers.) Of 1,130-cc capacity, with forged crankshaft and pistons, DOHC, four valves per cylinder and EFI,

V-Rod Revolution Engine: Porsche and Harley make air and ...

It is no rocket science; the engine of the motorcycle is cooled naturally by the outside atmospheric air. This is the reason why you will find the engine heads of the air cooled motorcycles have fins on them. The basic reason behind this is to increase the surface area of the engine in contact with air for quicker heat exchange.

Air Cooled Vs Liquid Cooled Motorcycle Engines » BikesMedia.in

The Harley-Davidson Milwaukee-Eight engine is the ninth generation of "big twin" engines developed by the company, but only Harley's third all-new Big Twin in 80 years, first introduced in 2016. These engines differ from the traditional Harley Big Twin engines in that there are four valves per cylinder, totaling eight valves, hence the name.

Harley-Davidson Milwaukee-Eight engine - Wikipedia

When Harley launched the 2014 model range this week they introduced a new Twin-Cooled 103 and 110 engine to the range. By Twin-Cooled they mean that water and coolant is used to cool the heads near the exhaust ports where most of the heat is generated. It seems this has largely been done for rider comfort and to pass tough new emissions laws.

Harley has applied for a patent for a new balancer shaft design Newly discovered patent images show that Harley-Davidson is developing a new air-cooled V-twin engine that will have variable valve...

Harley-Davidson developing new air-cooled V-twin

Built from the bottom up in Milwaukee, this street-tuned 131-cubic-inch Screamin ' Eagle Crate Engine is designed to run with a wide open throttle at high engine speeds and provide instant passing power from cruising speed.

Screamin' Eagle Milwaukee-Eight 131 ... - Harley-Davidson

Harley Davidson motorcycle engines are exposed to extreme heat. In addition, because the engine is air-cooled, it tends to get even hotter if it stays idle due to a traffic jam. It can actually reach temperatures as high as 240 degrees Fahrenheit. The increased heat leads to a viscosity, which in turn influences the lubricity of the oil. In ...
