America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

"There is a plethora of policy books on the market, but none illustrate the steps in the policy process better than this one. The high caliber editors and contributors, all of whom have been involved in policy work, bring years of experience to illustrate the key points... This publication is timely as the shift in healthcare requires input from all health professionals, but especially nurses who are at the frontline of healthcare change and delivery. This outstanding resource will help motivate many more nurses to get involved in the policy process... politics—this is a practical, "how-to" book written to help advanced students and nurse leaders develop health policy skills to advocate for patients from the bedside to the larger political arena. Co-published with the American Nurses Association (ANA), the book examines the pivotal role of nurses' involvement in health policy and describes the requisite steps for facilitating policy change—from understanding the political system through activating a plan and beyond. It features the voices of a wide variety of nurse leaders who discuss policy work both locally and nationally through descriptive case histories. The book discusses those qualities and skill sets that are needed for advocacy at the bedside and other arenas where health policy is determined. It examines the political system and opportunities for nurse involvement, and clarifies the process of identifying issues that need a policy solution. Because citing research is an integral component of health policy solutions, the book describes how research can be used to strengthen policy initiatives. The book guides the reader step by step through the process of creating a work plan and describes the resources needed to accomplish policy change. Activating an action plan and strategies for working with the media are covered, along with the process of taking a leadership role, evaluating outcomes, using policy to eliminate health inequities, and maintaining and expanding momentum. Woven throughout the book are the major themes of ethics, leadership, safety, and the quest for quality of care. The text provides information and perspectives relevant to the American Association of Colleges of Nursing (AACN) doctor of nursing practice (DNP) Essentials, and includes multimedia electronic links to resources (podcasts, online articles, social network resources, and key political websites) that promote policy research and leadership development.

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)."--Online AHRQ blurb, <http://www.ahrq.gov/qual/nursesfdbk>.

Properly performing health care systems require concepts and methods that match their complexity. Resilience engineering provides that capability. It focuses on a system 's overall ability to sustain required operations under both expected and unexpected conditions rather than on individual features or qualities. This book contains contributions from international experts in health care,
