The explosive 7th book in the bestselling BEYOND series. The sectors will never be the same... Adrian Maddox fled his royal life—and tragic past—in Sector One, choosing instead to join up with the O ' Kanes. For years, he ' s lived by one rule: love fast, love hard, and always be willing to walk away. He ' s managed to guard his heart, keep it whole and untouched—until now. They couldn ' t be more different—Dylan, the brilliant, burned-out doctor from Eden who drowns his pain with drugs and self-destruction. Scarlet, the sensuous, sexy rocker from Three, a woman unafraid to embrace the world. And Jade, the whore turned spy from Sector Two, who battled addiction and came out stronger than anyone he ' s ever met. Separately, they make Mad long to open his heart. To tumble head-first into a sea of possibilities and wild love. Together, they make him burn, inside and out, with lust and unbearable, unimaginable pleasure. Then one fateful moment shakes their world to its foundations—and leaves the sectors on the verge of all-out war with Eden. It ' s the biggest fight the O ' Kanes have ever faced, and Mad and his lovers are at the dead center of it. They could end up with everything they never knew they wanted—or lose it all. Including their lives.

Virtual Reality has the potential to provide descriptive and practical information for medical training and therapy while relieving the patient or the physician. Multimodal interactions between the user and the virtual environment facilitate the generation of high-fidelity sensory impressions, by using not only visual and auditory, but also kinesthetic, tactile, and even olfactory feedback modalities. On the basis of the existing physiological constraints, Virtual Reality in Medicine derives the technical requirements and design principles of multimodal input devices, displays, and rendering techniques. Resulting from a course taught by the authors, Virtual Reality in Medicine presents examples for surgical training, intra-operative augmentation, and rehabilitation that are already in use as well as those currently in development. It is well suited as introductory material for engineering and computer science students, as well as researchers who want to learn more about basic technologies in the area of virtual reality applied to medicine. It also provides a broad overview to non-engineering students as well as clinical users, who desire to learn more about the current state of the art and future applications of this technology.

"Abacus to smartphone" examines the evolution of mobile and portable computing from the beginning of time until today's modern devices. Historian and journalist Evan Koblentz focuses on the technological advances that led to where we are now, including many stories never before told.

This revised, updated second edition provides an accessible, practical overview of major areas of technical development and clinical application in the field of neurorehabilitation movement therapy. The initial section provides a rationale for technology application in movement therapy by summarizing recent findings in neuroplasticity and motor learning. The following section then explains the state of the art in human-machine interaction requirements for clinical rehabilitation practice. Subsequent sections describe the ongoing revolution in robotic therapy for upper extremity movement and for walking, and then describe other emerging technologies including electrical stimulation, virtual reality, wearable sensors, and brain-computer interfaces. The promises and limitations of these technologies in neurorehabilitation are discussed. Throughout the book the chapters provide detailed practical information on state-of-the-art clinical applications of these devices following stroke, spinal cord injury, and other neurologic disorders. The text is illustrated throughout with photographs and schematic diagrams which serve to clarify the information for the reader. Neurorehabilitation Technology, Second Edition is a valuable resource for neurologists, biomedical engineers, roboticists, rehabilitation specialists, physiotherapists, occupational therapists and those training in these fields.
