Franklin, Jack, Marla, Thadius, and Caitlin... this unlikely group of assorted misfits are the Cemeterians, a group that will take on any job - no, really, we mean any bloody job (money's a bit tight right now)! Trudge through disgusting sewers to battle manatee-massacring mermaids and soggy cultists, creep through creepy, fog-littered cemeteries straight out of an ancient Hammer Film soundstage, confront undead lecherous lodgers and other assorted beasties, creepies, and ghoulies. It all comes down to whether an adolescent giant Automaton, a truly mad, Mad Scientist, a surly Necromancer, a Banshee's granddaughter, and a reluctant furry monster straight from under your little sister's bed can manage not to kill each other - or, at least, quit fighting over the tele-privilege-schedule long enough to get the job done! Not likely.

One of the most remarkable mechanized campaigns of recent years pitted the brutal and heavily armed jihadis of Islamic State against an improvised force belonging to the Kurdish YPG (later the SDF). While some Kurdish vehicles were originally from Syrian Army stocks or captured from ISIS, many others were extraordinary homemade AFVs based on truck or digger mechanicals, or duskas, the Kurds' version of the technical. Before US air power was sent to Syria, these were the Kurds' most powerful and mobile weapons. Co-written by a British volunteer who fought with the Kurds and an academic expert on armoured warfare, this

study explains how the Kurds built and used their AFVs in the war against 'Daesh', and identifies as far as possible which vehicles took part in major battles, such as Kobane, Manbij and Raqqa. With detailed new artwork depicting the Kurds' range of armour and many previously unpublished photos, this is an original and fascinating look at modern improvised mechanized warfare.

Developed by experts on schizophrenia and exhaustively reviewed by APA members, the "American Psychiatric Association Practice Guideline for the Treatment of Patients With Schizophrenia" provides therapists with a set of patient care strategies that will aid their clinical decision making. The guideline describes the best and most appropriate treatments available to patients with schizophrenia, including psychopharmacological treatments, ECT, and psychosocial and community interventions. It delineates the process of treatment planning and identifies areas in which research may improve our understanding and management of this condition. This guideline will also help managed care organizations develop more scientifically based and clinically sensitive criteria for the utilization and reimbursement of psychiatric services. Armed with these guidelines, clinicians can improve the care of their patients with schizophrenia and enable them to lead happier and more productive lives.
