In Search of Time begins with our earliest ancestors' perception of time and the discoveries that led—with much effort—to the Gregorian calendar, atomic clocks, and "leap seconds." Falk examines the workings of memory, the brain's remarkable "bridge across time," and asks whether humans are unique in their ability to recall the past and imagine the future.

But the real "problem of time," as it has become known, arose in the 1960s as physicists struggled to combine these two frameworks—each successful at describing its own realm of the universe, either the very tiny or the large. The search for an overarching "theory of everything," a set of rules that governed objects of all sizes, was on.
