Intensive Agriculture and Sustainability: A Farming ...  
Sustainable agriculture will have to prove itself facing with intensive agriculture. Even though it is more reasonable, it cannot offer the same short-term returns. With the growing population and the persistently high levels of hunger and malnutrition, sustainable agriculture yields need to address the food security issue by producing more in less time, while using fewer natural resources.

Intensive Agriculture and Sustainability: A Farming ...

Intensive farming practices which are thought to be sustainable have been developed to slow the deterioration of agricultural land and even regenerate soil health and ecosystem services. These developments may fall in the category of organic farming , or the integration of organic and conventional agriculture.

---

Intensive farming - Wikipedia

Agriculture must become more sustainable while producing more. A common perception holds that "sustainable" agriculture must be more organic, low-input or less intensive. These production systems, however, typically yield less per unit of land, meaning more extensive farming is required to meet food demand.

---

Large, intensive farming contributes to sustainability ...

Three principles for a sustainable model of agriculture. Professor Cameron and his team believe that a sustainable model for intensive agriculture is founded on three principles: Managing soil by direct manure application, rotating annual and cover crops, and practising no-till agriculture (not cultivating and preparing the land). These practices connected to ‘ conservation agriculture ’ restore soil organic matter, structure, water-holding capacity and nutrients, averting soil loss while ...

Sustainable agriculture in the EU | European Commission  
Sustainable agriculture takes many forms, but at its core is a rejection of the industrial approach to food production developed during the 20th century. This system, with its reliance on...

---

Sustainable Agriculture | National Geographic  
The next step will have to move beyond the straightjacket of the current CAP policy framework, looking into how to further reduce various pressures resulting from intensive agriculture, even if this means moving towards less intensive production and helping farmers transition towards more sustainable practices ” .

---

Agriculture and Sustainable Water Management in the EU ...  
Agriculture production is highly dependent on water and increasingly subject to water risks. It is also the largest using sector and a major polluter of water. Improving agriculture ' s water management is therefore essential to a sustainable and productive agro-food sector. Agriculture is expected to face increasing water risks in the future
