Graph theory normally receives little if any attention at school but is an interesting subject with a range of practical applications. This is an extremely lucid introduction, requiring very little previous mathematical knowledge - just elementary arithmetic - and is readily comprehensible to non-specialists. Thoroughly recommended.

Introduction to Graph Theory. A stimulating excursion into pure mathematics aimed at "the mathematically traumatized," but great fun for mathematical hobbyists and serious mathematicians as well. Requiring only high school algebra as mathematical background, the book leads the reader from simple graphs through planar graphs, Euler's formula, Platonic graphs, coloring, the genus of a graph, Euler walks, Hamilton walks, and a discussion of The Seven Bridges of Konigsberg.

this is a short, elementary introduction to graph theory. the content is fine, but I found a lot of passages extremely talkative and pointless. for example, at the end of the "euler's formula" section, there is a 5 page section telling topology jokes, explaining what high school algebra is, mentioning roman numerals, and name dropping descartes. the book is about 250 pages long, but if you could remove all of the non-content, it would likely be about 80 pages. each chapter has a 'suggested ...

Mr. Trudeau has done a fabulous job of introducing graph theory in a way which is understandable and intellectually provocative. He mentions that some of the problems are easy, and that some have been unsolved. In both cases, they both are fully illustrative of the subject matter. If you want to begin exploring graph theory, this book is for you!

1993, Richard J. Trudeau, Introduction to Graph Theory, Dover, page 47, In graph theory there are two concepts of "sameness" whereby graphs are judged to be "the same", namely equality and isomorphism. [...] An indication of the pervasive role isomorphism has in graph theory is the fact that isomorphism has virtually captured the word "is". 1998, B é la Bollob á s, Modern Graph Theory, Springer, page 103,
