This unique and comprehensive handbook examines the various models of stress, coping, and health and their relevance for nursing and related health fields. Building on the first edition that has been highly-praised for its analysis and critique of existing models and its discussion of new research surrounding self-regulation and stress, this Second Edition continues to provide a critical analysis of the field while providing up to date cutting-edge research. Under the expert editorship of Dr. Virginia Hill Rice, experienced scholars and practitioners present a broad range of issues and research that relate to stress and health, such as response-oriented stress; stimulus-oriented stress; and transactional stress, coping, and health in children, adolescents, attitudes, and much, much more.

Adolescent Health is a survey textbook that includes an overview of existing theories and current research on interventions that address the social morbidities and mortalities of adolescents. Author Lynn Rew examines theories from a variety of professional disciplines that provide frameworks for understanding adolescent health behavior and health outcomes. Each theory is presented in terms of its essential elements, including its origin, a brief background of the theorist's philosophical paradigm, the purpose and usefulness of the theory, the meaning and scope of the theory, and, when available, empirical referents.

The second edition of this popular textbook continues to demonstrate the application of theory to nursing practice, presenting a clear strategy for choosing and applying specific theories to specific clinical situations. Each chapter follows a common format: a case is presented, along with several possible theories that might be applied to it. Each theory includes a concise description, with references and recommended readings for those who want more in-depth coverage. Finally one theory is selected for each case and is described in detail, ultimately creating a nursing care plan, with support from the theory. In all, nearly 10 middle-range theories are presented. New to this edition is a selection in each chapter about research supporting the theories discussed. In recognition that a case study format can not encompass all practice circumstances, the final chapter provides the framework for using the strategy in any clinical situation.

This thoroughly updated and revised new edition of the award-winning series on measurement presents nearly 80 actual, tested intruments for assessing nursing outcomes in a multitude of settings and situations. Each tool is accompanied by a descriptive essay that includes information on purpose, administration, scoring, and reliability and validity. Whether you are interested in measuring patient outcomes, evaluating patient learning, or assessing the effectiveness of teaching and learning in a nursing school, this compendium can provide the authoritative tools you need.

Filling a key need, this practical volume provides state-of-the-art approaches and tools for evaluating both health-related behaviors and psychosocial aspects of medical illness. The book begins by presenting a comprehensive biopsychosocial assessment framework. Evidence-based strategies are described for assessing such key lifestyle factors as tobacco use, alcohol and other drugs, physical activity, and social support. Behavioral, cognitive, and emotional issues associated with a range of specific medical conditions--including cancer, cardiovascular disease, diabetes, chronic pain, and others--are addressed. Chapters on assessment of specific populations cover pediatric patients, older adults, ethnic/racial minority groups, organ transplant and bariatric surgery patients, and primary care.
