As a tutor at the Science and Math Learning Center (SMLC) at James Madison University (JMU), I have seen a disconnect between students' preparation from their high school math classes and their application of particular topics in higher level math classes (i.e. Calculus I). As a future high school math teacher, I wanted to investigate the expectation gap between high school and college math classes. I observed a Calculus I class during the first week of classes to determine the students' initial struggles. I finally landed on the topic of logarithms and specifically the rules associated with them. I conducted a survey in the same Calculus I class, and collected data on the students' college and high school math classes and grades, other university math classes and grades, and their current and expected grade in the class. I also presented a problem for them to solve, requiring logarithmic differentiation, to determine their ability to apply a high school math topic in a Calculus I setting. I took the responses from the problem and compared them to the other data collected to see if interesting patterns arose to determine if there was a disconnect between high school math classes and the application of those topics in college math classes. I ultimately focused on the freshmen in the class for my analysis because they are the closest removed from high school. In addition, the majority of the participants from the Calculus I class were freshmen. From my analysis, I observed that many freshmen did well in their Algebra II courses in high school (when logarithms are taught), but most were struggling with applying the rules of logarithms to answer the question on the survey.

Uses the experiences of four schools to illustrate how to link teacher performance to student learning by using a system of objective measurements.

A point of departure for future national debate about the proper content of American education from kindergarten through 8th grade. An idea of a sound elementary school core curriculum. Outlines a structure and sequence for knowledge and skills in 7 subjects: English, Social Studies, Math, Science, Foreign Language, Fine Arts, and Physical and Health Education. Includes school profiles of curricular excellence in 7 schools.

Banish boredom once and for all! If your STEM lessons are falling on disinterested ears, mix things up with engaging, brain-based science and math strategies that captivate students' attention, activate prior knowledge, and invigorate interest. Blending current research on the student brain with practical methods for teaching science and math, Almarode and Miller identify six essential "ingredients" in a recipe for student success. You'll discover: A customizable framework you can use right away Classroom-ready, content-specific attention grabbers Overt and covert strategies to boost behavioral, emotional, and cognitive engagement Techniques for making relevant connections that maximize retention

An encyclopedia about parenting with over 2,000 entries covering all aspects of child rearing from A to Z.
